From laggard to leader?
Closing the euro area’s technology gap

Isabel Schnabel, Member of the Executive Board of the ECB
2024 Europe – US Symposium, Washington, D.C.
Labour hoarding may explain declining productivity growth in the euro area

**Productivity growth per employee (%)**

- EA
- US

**Employment rate (share of population)**

Sources: Eurostat and Haver Analytics.

Notes: The dashed lines represent the pre-pandemic employment rate, i.e. in 2019 Q4, in the corresponding colour for EA and the US.
Euro area started to lose competitiveness at the turn of the millennium

Long-term developments in productivity per hour worked

**Ratio of EA-4 to US**

**Index: 1995 = 100**

Source: Long-Term Productivity Database and ECB calculations.
Notes: EA-4 is a weighted average of productivity developments in Germany, France, Italy and Spain.
Rising gap in IT-related capital stock between euro area and United States

Real IT-related capital stock
(index: 1995 = 100)

Source: EUKLEMS.
Lower barriers to entry and higher competition support rise of young superstar firms

Annual labour productivity growth of surviving firms by age group (mean, in %)

Source: ECB Economic Bulletin Issue 1(2022). Data from Bureau van Dijk Orbis, the Bank for the Accounts of Companies Harmonized (BACH) database and ECB staff calculations.

Average characteristics of young superstar firms and other young firms
(lhs: ratio; rhs: number of employees, intangible intensity in EUR thousands, labour productivity in EUR ten-thousands)

Notes: Each bar represents the coefficient from a regression of each variable listed in the x-axis on a dummy for the firm being a young superstar firm and a set of fixed effects controlling for the different countries, sectors and years. Productivity is computed as real value added per employee at the firm level. Intangible intensity is computed as the ratio of intangible capital to number of employees. Investment is computed as the change in real fixed tangible capital over the previous period’s real fixed tangible capital. The period considered begins after the great financial crisis to avoid potential slumps.
Large firms invest more in ICT, but most firms in the euro area are small.

Employment by enterprise size, business economy

(percentage of total employment)

Source: OECD.

Notes: Legend refers to number of employees/persons employed at firm level.
Few firms reap benefits from digitalisation, also reflecting shortages of skilled workers.

**Estimated impact of digitalisation on TFP growth of firms with different initial TFP levels**

digital investment intensity

Note: x-axis: proximity to frontier (decile, lowest-highest). Dashed lines refer to confidence intervals.

**Share of adults without upper secondary education**

(% of 25-64 year-olds)

Source: OECD.

Notes: Data refer to 2022 or latest available.

Higher electricity prices undermine price competitiveness and industrial production

**Industrial retail electricity prices**

(EUR/MWh)

Sources: Eurostat, EIA, DESNZ, CEIC, METI and ECB staff calculations.
Latest observation: Q2 2023 for EU and JP, Q4 2023 for US, UK, KR and CN.

**Euro area industrial production**

(index: December 2019 = 100)

Sources: Eurostat, Trade Data Monitor and ECB staff calculations.
Notes: Data are seasonally-adjusted. Industrial production indices for individual sectors are aggregated with value-added weights. Low (high) energy-intensity sectors are defined as those with an energy intensity lower (higher) than that of the median sector. For more details, see Chiacchio, De Santis, Gunnella and Lebastard (2023).
Latest observation: January 2024.
Ageing and preference shifts require higher productivity growth to sustain social system

Old-age dependency ratio in 2022 and increase until 2070

Source: European Commission Europop 2023 population projections.
Note: The old-age dependency ratio is the population aged 65 and over as a % of the population aged 20-64. Data are shown as the proportion of dependents per 100 persons of working-age.

Average hours worked per person employed (index: 2015=100)

Source: OECD data.
Slow diffusion of technologies can give rise to “winner-takes-most” dynamics

**Euro area mark-up distribution**

**TFP levels of frontier and non-frontier firms in the services sector**

(2006=1)

Sources: Occasional Paper Series No. 268 (ECB). Own calculations using ECB iBACH-Orbis Database.

Notes: Frontier firms are defined as those at the top 5% of the TFP distribution in a given year in a 4-digit industry. Non-frontier firms are defined as the median firm in a given year in a 4-digit industry.

Notes: The dotted line shows the weighted median, the continuous line the weighted average, and the range is between the weighted 10th and 90th percentiles. See the paper for the calculation of markups using firm-level data.
Low productivity growth puts pressure on unit labour costs and hence inflation.

Headline inflation in the euro area (HICP)
(annual percentage changes)

Source: Eurostat.
Last observation: March 2024.

Unit labour costs
(annual percentage changes)

Source: Eurostat and ECB calculations.
Note: A positive contribution of productivity to unit labour costs implies negative productivity growth.
Last observation 2023 Q4.
Harmful trade restrictions risk impeding international trade

Source: Global Trade Alert (GTA) and ECB staff calculations.
Notes: Total number of liberalising and harmful measures announced globally each year (adjusted for reporter lag at 31 of December each year). For the rhs series, affected flow includes outward and outward subsidies that are evaluated as red and harmful by the GTA during the coverage period shown without an adjustment for reporting lag. Latest observation: 2023.
Limited progress in cross-border trade in services and in financial market integration

**Intra-EU trade in goods and services**
(annual, in percentage of GDP)

- Goods
- Services

**Price-based and quantity-based composite indicators of financial integration**

Source: Eurostat and ECB staff calculations.
Notes: Intra-EU trade is obtained by summing intra-exports and imports as a ratio of GDP, measured in euros.
Latest observation: 2022.

Source: ECB staff calculations.
