Learning objectives of the Eurosystem exploratory work and KPIs

Agenda item 2

Reminder and introduction

- The Eurosystem presented its learning objectives in the 20 October NTW-CG meeting.

- For each objective, *Key Performance Indicators* have been defined and the Eurosystem intends to use them for:
    - Comparing the solutions directly when possible (category I)
    - Learn more about the solutions (category II)
    - More general research questions (category III)

- Each KPI provides information on what the Eurosystem intends to learn and the type of measurements that would be used.

Participation to exploratory work and KPIs

Eligible market participants and eligible market DLT operators will be asked to report the results for all KPIs that are relevant to the activities they will conduct in trials and experiments. Each KPI specifies the type of data to be collected (e.g. surveys, settlement data, etc.)

For KPIs marked for **Eurosystem-led experiments** (e.g. scalability in KPI 1.3, reliability in KPI 3.1), relevant eligible market participants and/or market DLT platforms could be invited to participate and contribute to these experiments.

The Eurosystem may update the KPIs as new information emerges (also for non-DVP use cases)
