Money Market Contact Group December 2013

J.P. Morgan

December 2013
Key Developments

Macro Environment
- Euro wide pricing pressure slowing considerably giving rise to concerns about the growing risk of deflation
- US economy appears to have shrugged off immediate fear of damage due to the Debt Ceiling negotiations and Tapering to post strong Payrolls figures
- Rates seen on hold until 2016 – slight bias towards easing but would require another shock

Monetary Policy
- ECB’s 25pt cut to the Refi rate while leaving rate on Deposit Facility unchanged
- Market taken by surprise by the move despite forward guidance

Regulatory
- EBA’s stance on Leverage Ratio to be closely monitored
- Impact of liquidity regulation and central bank monetary policy
- Availability and concentration of liquid assets to meet liquidity and margin requirements
- Harmonisation under the Single Europe Rulebook
- Recovery and Resolution
EURUSD vs EURGBP

- EURUSD proved surprisingly resilient over past quarters
Term Rates

- Breakdown in rate correlation between EUR, GBP and USD term rates
Peripheral Spreads vs Germany

Italian & Spanish German 10Y Sov Spread

- Spreads for both Italy and Spain trending lower
- Significantly reduction in volatility
• Sentiment regarding Bank stocks improved over 2013
• Concerns around Bank capitalisation within the Eurozone appear to have receded
• Result of up coming Bank stress tests appears not to weigh on Bank equity currently, with little concern about broad equity raising to be required
Convergence in European Banking System

Itraxx S20 Member Financials - 5y CDS

BP

Unicredit SpA

Muenchener Rueckversicherungs AG

Money Market Contact Group - December 2013

J.P. Morgan

Deposits are non-seasonally adjusted Euro area non-bank, non-government deposits as of Oct 2013. We take total deposits (item 2.2.3, in MFI balance sheets minus “deposits from other financial institutions”, which includes deposits from securitized vehicles and financial holding corporations among others. We also subtract repos (item 2.2.3.4) from the total figures to give a cleaner picture of deposits outside interbank borrowing. ECB borrowing and Target 2 balances are latest available. ECB borrowing is gross borrowing from regular MROs and LTROs.

- Germany’s exposure to the rest of the Target 2 payment system remains large
- Only Cyprus has seen a significant change in its position across the past year
• LTRO repayments have gradually accumulated, picking up pace over the past quarter.
• The impact of these repayments on the daily Eonia fix however has been muted to date.
Volumes in the Eonia Market

EONIA - 3y History

Money Market Contact Group - December 2013
Risk Premium in Eurozone Reducing - cont

- $ funding pressures for European Banks easing as USD funding market reopen to European names
- Volatility in short dated fx swap market has significantly reduced from subsequent years
- European Banks taking advantage of the FX Basis leaving additional balances at the Fed
Risk Premium in Eurozone Reducing - cont

- Risk premium significantly reduced
- ECB’s forward guidance failed to prepare the market for November’s easing.
- ECB’s objective to reassure markets that rates would remain low for a prolonged period now seems to have been achieved
US Money Market Fund Exposure to French Banks

- US Funds gradually increasing exposure to French banks as sentiment improves
• Other than seasonal factors triggering pricing pressure, Italian GC converging on Core Europe
• Market beginning to increasingly differentiate between French and German GC following France’s ratings downgrade
Italian GC against EONIA

- Divergence of Italian GC away from Eonia rate highlights liquidity squeezes
- What will be the impact of year end on pricing?
Euro Area Gross Bank Debt Issuance

Includes secured, unsecured and securitised issuance in any currency. Excludes short-term debt (maturity less than 1-year) and self-funded issuance (where the issuing bank is the only book runner).

Bank Deleverage

Aggregated Euro Area Bank Balance Sheet

€tr, last obs is for Sep 2013

- Reduction of 10%

- Impact of factors such as Leverage Ratio, LCR and upcoming Eurozone Bank Stress Tests behind motivation for banks to reduce Balance Sheet
  - LTRO 400bio
  - Interbank 400bio
  - Derivatives 1.5 trillion
  - Non resident holdings in European Banks 500bio

- 3.5 trillion reduction from peak, of which 2.6 trillion driven by ‘core’ Europe banks
- 30% Balance sheet to support Euro Area real economy (50% in the US) = Balance sheet reduction trend to continue

Source: ECB
ECB’s Next Steps

• What options are open to the ECB?

• Regarding the ECB policy rate, options for the ECB could involve

  1. Taking the deposit facility rate negative, potentially in increments of less than 25bps
  2. Narrowing the corridor between the MRO rate and the deposit facility rate to zero

• While the system is technically ready, will there be an adverse impact on funding markets and what does that mean for Bank dependency on LTRO funding

• Liquidity focused measures could include

  1. Introduction of QE
  2. Reduction in Reserve Requirements
  3. Abolition of the Bond Purchase Sterilization Program
  4. Introduction of additional LTROs
