1 Background

2 Delta vs complete reports

3 Detailed description of delta versions
T2S transmits information to T2S Actors (CSDs, NCBs or DCPs) via different information management services: Status Management, Report Management and Query Management application processes.
Following are different criteria which characterise reports. These criteria influence the generation of the report.

<table>
<thead>
<tr>
<th>CRITERIA</th>
<th>POSSIBLE VALUES</th>
<th>DETAILS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data Scope</td>
<td>Concerned Party</td>
<td>Depending on the Report Type the created report contains business information related to the T2S DCAs, SACs, positions, instructions, etc. of a specified party</td>
</tr>
<tr>
<td>System Entity Wide</td>
<td>Community / Party based</td>
<td>The report covers either all the information referred to a system entity or a party</td>
</tr>
<tr>
<td>Report triggering</td>
<td>fixed time / business event</td>
<td>Creation time of a report</td>
</tr>
<tr>
<td>Covered Period</td>
<td>From / To</td>
<td>Date and time from / to the data are covered</td>
</tr>
<tr>
<td>Report Format</td>
<td>ISO XML messages / Flat Files</td>
<td>Flat files have a more compressed format, are available only for few reports and are available at the end of day and the end of night-time settlement</td>
</tr>
<tr>
<td>Report classification</td>
<td>Complete report, delta report</td>
<td>Delta reports allow to identify intraday new, modified and deleted information since the creation of the previous report</td>
</tr>
<tr>
<td>Report type</td>
<td>Cash forecast, Statement of holdings, Statement of static data, etc.</td>
<td>Depending on what reports inform (settlement instructions, securities positions/cash balances, static data)</td>
</tr>
<tr>
<td>Communication channel</td>
<td>A2A/U2A</td>
<td>Possibility of A2A/U2A (screen-based for T2S Users) modes.*</td>
</tr>
</tbody>
</table>

* Flat Files not available for download – U2A generation

# Complete and delta versions are available
Table of Contents

1 Background

2 Delta vs complete reports

3 Detailed description of delta versions
T2S offers “complete” and “delta” versions of reports generated upon reaching pre-configured time or business events.

- **Complete** and **delta reports** cover the current business day in different ways (please see below graphs).
- Both report types are based on the most recent information available in T2S.
- In general, delta reports complement complete reports for settlement reconciliation purposes.
- Delta report contain any data (e.g. new pending instructions) whose status/content changed since the previous reporting (if it occurred on the same day) or since the Start of Day.

**Differences between complete and delta versions are in the report scope, which...**

- **Complete Reports**
  - …includes a full snapshot of data at the time of the creation of the report

- **Delta Reports**
  - …includes information on items which changed values since the previous report was created*, or since the Start of Day

* The previous report can be a complete report or a delta report.
### T2S offers the following reports in both delta and complete versions

<table>
<thead>

</tbody>
</table>
The following slides contain information on four report types which are offered by T2S and clarify differences between the complete and delta versions.

1. Statement of Holdings
   - semt.002

2. Statement of Transactions
   - semt.017

3. Statement of Pending Instructions
   - semt.018

4. Statement of Settlement Allegations
   - semt.019
The Statement of holdings (semt.002) provides information about the different securities positions of a T2S Actor’s securities account in T2S. The report can contain all holding information (Complete) or only changes since the previously sent report or start of the day (Delta).

**COMPLETE**

- Informs the T2S Actor about the securities positions per Securities Account at the moment of the report’s creation.

- Includes securities positions with a quantity different from zero as well as securities positions with a quantity of zero that have been subject to settlement on the current business day.

- Includes aggregate positions for available as well as not available positions (including breaking down of sub positions).

**DELTA**

- Includes the security positions per ISIN which were either newly created, changed or turned to zero in the reporting period (no report on positions of securities that did not get impacted within the reporting period).

- Also includes the aggregated positions and position breakdowns.

- The reporting period starts at the creation of the previous Statement of Holdings in the current settlement day, or by default at the start of day if no such report was created since the start of the current settlement day.

*Note:* For Delta reports
- Securities positions with zero quantity that have not changed will never be reported
- ISINs that have not changed would not be reported (“Balance for account” tag would not exist)
The Statement of transactions (semt.017) is available in both versions: complete and delta. This statement provides information about the settlement instructions of the respective CSD or DCP that settled completely or partially in T2S for a given settlement day.

**COMPLETE**
- Includes all partially settled and fully settled instructions during the period indicated in the reporting period
- Informs T2S Actor about settlement instructions which reached "settled" status or "partially settled" status* since the Start of Day (SoD) of the current settlement day.

**DELTA**
- Includes all newly partially settled and fully settled instructions during the reporting period
- Informs T2S Actor about
  - Settlement instructions which reached "settled" status or "partially settled" status* since the generation of the previous report for the current business day, OR
  - (if no previous instance exists) since Start of Day (SoD) of the current settlement day, OR
  - instructions which were already partially settled at the beginning of the reporting period and had another successful partial or final settlement within the reporting period.

* Meaning that the settled quantity and settled amount are returned and shown in the report
Delta vs complete reports

Statement of Pending Instructions – semt.018

The Statement of Pending Instructions (semt.018) is available in both versions: complete and delta. This report is generated and sent based on the report configuration by the CSDs and DCPs.

<table>
<thead>
<tr>
<th>COMPLETE</th>
<th>DELTA</th>
</tr>
</thead>
<tbody>
<tr>
<td>▪ Includes pending Settlement Instructions that expect settlement at the current settlement day (including also recycled Settlement Instructions).*</td>
<td>▪ Includes new pending Settlement Instructions or pending Settlement Instructions which were modified or have changed their status as well as the Settlement Instructions which were formerly pending but are now cancelled</td>
</tr>
<tr>
<td>▪ Informs T2S Actor about the latest status and current attribute values of the reported Settlement Instructions (the report usually includes information that has been reported in the previous report as the status of some transaction may not have changed).</td>
<td>▪ Informs T2S Actor about all instructions whose status has changed since the creation of the previous Statement of Pending Instructions of the current business day, or by default since the start of day if such report was not already created since the start of the current settlement day.</td>
</tr>
</tbody>
</table>

* They must not have a final status (e.g. "partially settled" status; here the unsettled amount and unsettled quantity are returned) at the time of the report generation.
The Statement of Settlement Allegement (semt.019) is sent by T2S to a CSD or DCP. The report is used to provide information about the list of all Settlement Instructions as received from other T2S actors which are missing their corresponding Settlement Instruction from the CSD or DCP the report is addressed to.

**COMPLETE**

- Includes all SI as received from other T2S Actors which are currently missing a corresponding SI from the receiver of the report. A Settlement Instruction which was reported in the last Statement of Settlement Allegements and is now no longer reported indicates that this Settlement Instruction is no longer alleged, i.e. it has been matched or cancelled.

**DELTA**

- Includes newly alleged Settlement Instructions, alleged Settlement Instructions which were modified (e.g. linkage information of the original settlement instruction) along with cancelled and/or removed allegations.
- Informs T2S Actors about the before mentioned changes since the creation of the previous report of the current business day, or by default since the start of day if such report was not already created since the start of the current settlement day.

**Note:** The complete report does not report those Settlement Instructions which were formerly alleged but which are no longer outstanding whereas the delta report also shows those newly cancelled or newly removed.
Table of Contents

1 Background

2 Delta vs complete reports

3 Detailed description of delta versions
Delta reports contain changes from the previous report or from the Start of Day (SOD). The change will depend on the type of report:

1. **Statement of holdings**: A change in the securities position or sub-position of a securities account.

2. **Statement of Transactions**: The partial or full settlement of a security transaction.

3. **Statement of Pending Instructions**: New, modified and cancelled pending instructions. Previously reported pending instructions also included in case of successful partial settlement.

4. **Statement of Settlement Allegements**: New, modified alleged instructions (only partial settlement indicator) or the removal/cancellation of a previously reported allegation.

**Note**: Any change affecting an instruction other than those listed above (e.g. change in static data) is not considered a parameter for the inclusion in the above mentioned delta report. If, however, a change in static data impacts the status of a instruction or a balance it would then be reported.
Detailed description of delta versions
Statement of holdings – semt.002

- **Availability and timing:** The Statement of Holdings report is available in Complete and Delta versions and can be scheduled multiple times intraday. The first Delta and Complete version reports of the day will always differ. The delta version will not contain positions which did not change since SoD or since the generation of the previous report.*

- **Report content:** The delta version of the Statement of Holdings includes all the security positions which were either newly created, changed or turned to zero in the reporting period. The securities position for a specific securities account can be segregated as follows:
  - **Aggregate:** total quantity per financial instrument in the account (delta only includes the sum of the changed sub positions).
  - **Available:** total quantity per financial instrument in the account that is available, i.e. with no restriction of use (delta only reports the field if there has been a change).
  - **Not Available:** total quantity per financial instrument of the account that is not available, i.e. restricted for use (delta only reports the field if there has been a change).

* Please note that for further reference address to ECB presentation on “Availability of T2S Generated Reports”.
Report content (cont.)

- Balance Breakdown: For each position (AWAS*, EARM, BLCK, COLL etc.), the sum of the sub-positions (i.e. “additional balance breakdown”) for which there is a change.
- Additional Balance Breakdown: For each restriction type (BLCK1, BLCK2, RSV1 etc.) that has changed, the sum of all the restriction references.
- Quantity breakdown: All restriction references (RestrRef11, RestrRef12 etc.) for the changed restriction types.
- Short/Long Indicator: reports if the aggregate position sum is positive or negative**

* For AWAS, there are no sub-positions so total quantity is reported if changed.
** Please note that pending CR T2S-0519-SYS will introduce Short/Long Indicator for all aggregated positions and sub-positions reported.
No positions to report: If there are no securities positions (new, changed, turned to zero) to report, the Statement of holdings is provided containing only the header and general information. In case there is an account for which there are no positions to be reflected during the reporting period, T2S creates for this account a semt.002 with “ActivityIndicator” set to false.

The Statement of Holdings (semt.002) is used by T2S actors mainly for purposes of End of Day reporting and reconciliation.

Each time a position is modified since the previous report (SoD when applicable), it includes the updated position*

* Please see Example of semt.002 for clarification
After a booking of +200 in RestrRef1 positions, the following securities positions are stored:

<table>
<thead>
<tr>
<th>Securities Account 123 ISIN ABC</th>
<th>Restriction Processing Type</th>
<th>Restriction Type</th>
<th>Restriction Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000</td>
<td>AWAS</td>
<td></td>
<td></td>
</tr>
<tr>
<td>400</td>
<td>EARM</td>
<td>EEUR</td>
<td></td>
</tr>
<tr>
<td>150 + 200 = 350</td>
<td>BLCK</td>
<td>BLK1</td>
<td>RestrRef11</td>
</tr>
<tr>
<td>50</td>
<td>BLCK</td>
<td>BLK1</td>
<td>RestrRef12</td>
</tr>
<tr>
<td>15</td>
<td>BLCK</td>
<td>BLK5</td>
<td>RestrRef5</td>
</tr>
</tbody>
</table>

**Delta statement of holdings:**

<table>
<thead>
<tr>
<th>SAC 123 - ISIN ABC</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aggregate</td>
<td>400</td>
</tr>
<tr>
<td>Available</td>
<td>0</td>
</tr>
<tr>
<td>Not Available</td>
<td>400</td>
</tr>
<tr>
<td>BLCK</td>
<td>400*</td>
</tr>
<tr>
<td>BLK1</td>
<td>400</td>
</tr>
<tr>
<td>RestrRef11</td>
<td>350</td>
</tr>
<tr>
<td>RestrRef12</td>
<td>50</td>
</tr>
</tbody>
</table>

- On aggregated position level delta report does only provide sum of positions affected by the changes.
- On Restriction Type and Restriction Reference level the report provides all sub-positions and correct aggregated positions (if at least one sub-position of the Restriction Type changed).
- The three aggregated balances (Aggregated, available, not available) are always contained.
- All sub-positions that have not changed will not be reported (i.e. EARM and BLK5 positions are not reported)

*Note:*
When reporting a “sub balance” for e.g. BLCK, it would report the sum of all changed sub positions under “additional balance breakdown”. So BLCK = 350+50=400. BLK5 (15) is not included as there is no change for restriction type BLK5.
1) Safekeeping account is the first level of aggregation as it is the main mandatory field. The report will be generated per each SAC.
2) There should be as many "Balance For Account" tags displayed as many securities held.
3) Whenever the file size is exceeded (32 MB), a new one is created upon splitting. The new message aggregation will start at SAC level.
Availability and timing: The Statement of Transactions report is available in Complete and Delta version and can be scheduled multiple times intraday. The first report of the day would be the same for both Delta or Complete forms.*

Report content: The delta version of the Statement of Transactions contains instructions that have been settled or partially settled since the last report due to different business reasons. Securities account shall be complement with these relevant fields:

- Instructions: information regarding instructions applicable to this report (settled or partially settled instructions for the Party and account involved).
- Posting Quantity: quantity of the underlying financial instrument settled
- Posting Amount: amount of money that posted to the account (when payment is applicable).

When Partial settlement applies, the report will only inform the cumulative quantity/amount settled during the reporting period (Complete report informs about cumulative quantity/amount settled in the current business day).

* Please note that for further reference address to ECB presentation on “Availability of T2S Generated Reports”
No instructions to report: If there are no newly settled instructions to report, the Statement of Transactions report is provided containing only the header and general information. In case there is an account for which no settlement instructions settled during the reporting period, T2S creates for this account a semt.017 with “ActivityIndicator” set to false.

The Statement of Transactions (semt.017) is used by T2S actors mainly for purposes of End of Day reporting and reconciliation.

Each time a transaction is reported, it includes the updated amount/quantity*

* Please see Example of semt.017 for clarification
Example with partial settlement that occurred since last report with cumulative amount / quantity since last delta report for the same business date (if any exist) or since Start of Day (if not).

</tbody>
</table>

**Settlement Date D**

### Delta Statement 1
- Settled Quantity: 4,000 units
- Settled Amount: 8,000 EUR

### Delta Statement 2
- Settled Quantity: 1,000 units
- Settled Amount: 2,000 EUR

This is the envisioned behavior that will result from the implementation of T2S CR549.
Detailed description of delta versions
Statement of transactions – semt.017

1) Safekeeping account is the first level of aggregation as it is the main mandatory field. The report will be generated per each SAC.
2) There should be as many "Financial Instrument Details" tags displayed as many securities traded.
3) Whenever the file size is exceeded (32 MB), a new one is created upon splitting. The new message aggregation will start at SAC level.
Availability and timing: The Statement of Pending Instructions report is available in Complete and Delta form and can be scheduled multiple times intraday. The first report of the day will differ for the Delta and Complete version. The delta version will not contain pending instructions which did not change since SoD or the generation of the previous report (the same logic applies to the subsequent reports).*

Report content: The delta version of the Statement of Pending Instructions contains all instructions newly pending, modified, which had a change in the status or were cancelled since the last report. Securities account shall be complemented with the following relevant fields:

- Instructions: information regarding instructions applicable to this report (pending instructions that expect settlement at the current settlement day)
- Posting Quantity: quantity of the underlying financial instrument to be settled (cancelled when applicable)
- Posting Amount: amount of money that is to be/was posted to the account (when payment is applicable).

* Please note that for further reference address to ECB presentation on “Availability of T2S Generated Reports”
Status and Reason: current status of the underlying instruction (matching status, settlement status, processing status) and reason details (when applicable).

- **No instructions to report:** If there are no new, modified or with a change in the status pending instructions to report, a Statement of Pending Instructions report is provided containing only the header and general information. In case there is an account with no instructions to report during the reporting period, T2S creates for this account a semt.018 with “ActivityIndicator” set to false.

The Statement of Pending Instructions (semt.018) is used by T2S actors mainly for purposes of **End of Day reporting** and reconciliation.
Pending Instructions before creation of Delta Report 1:
- Pending Inx A: recycled (ISD in the past: D - 1).
- New pending Inx B (lack of cash)
- New pending Inx C (on hold)

Pending Instructions before creation of Delta Report 2:
- New pending Inx D (lack of securities)
- Pending Inx A: cancelled
- Pending Inx C: released (still pending: lack of securities)

### Settlement Date D

#### Delta - Statement of Pending Instructions 1
- Pending Inx B reported
- Pending Inx C reported

#### Delta - Statement of Pending Instructions 2
- Pending Inx D reported
- Cancelled Inx A reported
- Pending Inx C (change of status) reported

In the following example we will include recycled instructions, new pending instructions and pending instructions which have been modified from the previous report.
Detailed description of delta versions
Statement of Pending Instructions – semt.018

1) Safekeeping account is the first level of aggregation as it is the main mandatory field. The report will be generated per each SAC.
2) There should be as many "Txs" tags displayed as many pending transactions fulfilling the criteria previously explained.
3) Whenever the file size is exceeded (32 MB), a new one is created upon splitting. The new message aggregation will start at SAC level.

- Concerned Party
- Reporting period
- Moment of Extraction
Detailed description of delta versions
Statement of Settlement Allegements – semt.019

- **Availability and timing:** The Statement of Allegements report is available in Complete and Delta forms multiple times intraday. The first report of the day will differ for the Delta and Complete version. The delta version will not contain pending allegations which did not change since SoD or the generation of the previous report (same logic for subsequent reports).*

- **Report content:** The Statement of Allegements (delta) contains the following:
  
  ▪ New, modified (only partial settlement indicator) or with a change of status alleged instructions from other counterparties for both domestic and cross-border businesses for which T2S has not received a matching instruction from the report receiver.
  
  ▪ Allegement removals/cancellations are reported in the following cases:
    
    For alleged instructions from other counterparties:
    - if a matching instruction has been received
    - if counterparty cancelled its instruction

* Please note that for further reference address to ECB presentation on “Availability of T2S Generated Reports”
No allegements to report If there are no allegements to report (before mentioned for delta version), an Statement of Allegements report is provided containing the header section and general details of the message body until securities account tag with the “ActivityIndicator” field set to false.
In the following example we will include newly alleged settlement instructions, alleged settlement instructions modified from the previous report and previous allegations that are now cancelled or removed.

<table>
<thead>
<tr>
<th>Alleged Instructions before creation of Delta Report 1:</th>
<th>Alleged Instructions before creation of Delta Report 2:</th>
