Introductory remarks

What is a non-time critical payment in TIPS?
Payment transactions can be processed in TIPS differently depending on whether or not they are considered time critical.

Non – time critical payments in TIPS would be (if approved):

- An Additional Optional Service (AOS) under the SCT scheme
- Settled in TIPS
- Without the need of the maximum processing time of 20 seconds (as for an instant payment)
- CR 0041 planned to be implemented (TIPS-0041-URD Introduction of non-time critical instant payments in TIPS)

(*): In order to identify a transaction as a non-time critical payment in TIPS, the yellow field "Local Instrument Code" within the pacs.008.001.02 group header must be filled in with the identifying code ‘INSTNT01’ – the naming may be subject to change in CR review.

Same for IPs and NTC payments.

(*) This check is delegated to the Beneficiary PSP, since TIPS does not check neither the existence nor the status of the underlying instant payment transaction.

Same for IPs and NTC payments
Sending of non-time critical payments
3. Sending of NTC Payments

- SCT Inst scheme adherence 24/7/365 operating hours Using NTC payments does not prevent PSPs from being compliant with SCT Inst scheme
- TIPS will send NTC using the Instant Messaging transport protocol – no Store & Forward (i.e. stateless protocol)

PSP1 sends NTC payment to PSP2

- If the Beneficiary PSP is online, the NTC payment is correctly delivered
- If the Beneficiary PSP is temporary unavailable or in case of network failure in the delivery of the reply message:
  - the initial NTC payment transmission will get lost and
  - TIPS will perform the NTC payment retransmission – i.e. time based event
