

SSP V13 Qualified Configurations for Credit institutions and Ancillary systems

August 2019

In the tables below you can find two columns where system components qualified by the 3CB and valid for SSP release V13 are mentioned. Each column has to be read as a configuration set, i.e. no cross columns combinations are supported.

Customers using totally or partially different system components or versions than the ones mentioned here are responsible to verify the compatibility between their components and the ones listed in the table below in the test environment. In such case the 3CB can provide no technical support in case of problems.

These lists will be updated at every TARGET2 release.^a

Important news in this version of the qualified configurations is the completion of the migration from java applets to java plugin-free technology for Internet Access. From this version it will not be required anymore to have a Java Runtime Environment installed: Internet Explorer users will rely on the same configuration (based on the local installation of the Go>Sign Desktop Client) that has proved to be stable over the previous releases for Firefox users.

Approaching Windows 7 end of support, Windows 10 has been added in the supported Operating Systems list. Windows 7 will remain supported till 14 January 2020, Microsoft official end of life of this OS.

1. ICM

1.1. Internet Access

	System components and relevant versions for Internet Access	
Operating System - Microsoft	Microsoft Windows 10 Enterprise 64-bit Release 1709	Microsoft Windows 7 Enterprise Service Pack 1 64-bit
Internet Explorer	IE 11	
Mozilla Firefox	Enterprise Support Release (ESR) v 60.5.0	
Ascertia Go>Sign Desktop client	Version available ICM: Services – Administration - Download Ascertia Go>Sign Desktop	

^a In case of emergency fixes due to security reasons the list might be updated in between.

1.2. SWIFT Access

As far as SWIFT is concerned, the access to TARGET2 ICM will change from browse to WebAccess. Also in this case a JRE will not be needed anymore and a change of relevant URLs applied to be compliant with the new standard as follows:

- CUST environment: <https://trgt-papss-cust.ssp.browse.swiftnet.sipn.swift.com/>
- PROD Environment: <https://trgt-papss.ssp.browse.swiftnet.sipn.swift.com/>

	System components and relevant versions for SWIFT	
Operating System - Microsoft	Microsoft Windows 10 Enterprise 64-bit Release 1709	Microsoft Windows 7 Enterprise Service Pack 1 64-bit
Internet Explorer	IE 11	

SWIFT participants

The URL change will apply to all participants.
