Unconventional fiscal and monetary policy at the zero lower bound
Closed output gaps and record low unemployment before the pandemic

**Output gap**
(% of potential GDP)

**Unemployment rate**
(% of labour force)

Source: International Monetary Fund (World Economic Outlook, Jan 21)
Inflation remaining subdued in spite of broader measures of slack signaling scarcity

Broad measure of unemployment slack (U6) (% of augmented labour force)

- Euro Area
- US

Consumer price inflation (annual percentage changes)

- Euro Area
- Advanced economies

Sources: U.S Bureau of Labour Statistics (BLS), Eurostat and ECB staff computations.

Sources: Eurostat and IMF.
Notes: Annual data. Latest observation for 2020.
Phillips curve models pointing to structural factors explaining low inflation

Euro area Phillips curves: coefficient on slack across range of models

Sources: ECB staff calculation.

Euro area Phillips curves: decomposition of HICP excluding energy and food (annual percentage changes and percentage points contributions)

Sources: Eurostat and ECB staff calculations. The HICPX series is seasonally adjusted and displays a kink in 2015 due to a methodological change.
Notes: Same models used as for left-hand chart. All values are in terms of deviations from their averages since 1999 or later, depending on the specification. The bars show average contributions across specifications. The sample covers 1999Q1 to 2019Q4 to avoid the effect on estimation of the Covid-19 shock.
Low inflation coinciding with declining real short- and long-term interest rates

Real ten-year sovereign bond yields
(percentages per annum)

Estimates of euro area equilibrium rate
(percentages per annum)

Sources: IMF, FRED, Thomson Reuters, Jordà, Knoll, Kuvshinov, Schularick, Taylor (2019), Feenstra, Inklaar, Timmer (2015), ECB calculations. Notes: Real sovereign bond yields are the difference between the nominal yield in year t and realised inflation in year t. The euro area series is based on real GDP-weighted data for Germany, France, Italy and Spain. Real GDP data is based on Feenstra et al. (2015). Data for Italy before 1991 is based on Jordà et al. (2019), op. cit. Latest observation: 2020.

Sources: WGEM Report “The natural rate of interest: estimates, drivers, and challenges to monetary policy”, OP, No 217; Ajevskis (2018); Brand, Goy, Lemke (2020); Brand, Mazelis (2019); Fiorentini, Galesi, Pérez-Quirós, Sentana (2018); Geiger and Schupp (2018); Henderson, Lubik, Williams (2017); Judd (2017); Johannsen and Mertens (forthcoming). Notes: Ranges span point estimates across models to reflect model uncertainty and no other source of r* uncertainty. The dark shaded area highlights smoother r* estimates that are statistically less affected by cyclical movements in the real rate of interest. Latest observation: 2019Q4.
Inflation expectations adjusting downwards amid flattening yield curve

Survey- and market-based measures of inflation expectations (percentages per annum)

Source: Bloomberg, Refinitiv, and ECB calculations.
The 1y4y ILS refers to the inflation-linked swap curve. Survey expectations from the Survey of Professional Forecasters (SPF) refer to the mean of the reported probability distributions for year-on-year expectations 5 years ahead. Latest observation: 2021 Q1 (SPF), January 2021 (market data).

Slope of euro area OIS and US Treasury curve (percentage points)

Source: Refinitiv, Bloomberg, and ECB calculations.
Note: Data refer to the difference between the 10-year and the 2-year rate.
Pre-pandemic fiscal policy largely unresponsive to monetary policy easing
