5 April 2023

Philip R. Lane
Member of the Executive Board

March 2023 MPE: key macroeconomic variables

	March 2023 (annual percentage change)				Revisions vs December 2022 (percentage points)			
	2022	2023	2024	2025	2022	2023	2024	2025
HICP	8.4	5.3	2.9	2.1	0.0	-1.0	-0.5	-0.2
HICP excl. energy and food	3.9	4.6	2.5	2.2	0.0	0.4	-0.3	-0.2
Compensation per employee	4.6	5.3	4.4	3.6	0.1	0.1	-0.1	-0.3
Real GDP	3.6	1.0	1.6	1.6	0.2	0.5	-0.3	-0.2
Private consumption	4.3	0.7	1.3	1.4	0.3	0.0	-0.2	-0.1
Government consumption	1.4	-0.2	1.4	1.4	0.4	0.8	0.3	0.1
Total investment	3.7	0.3	1.4	1.8	0.6	-0.4	-0.8	-1.0
Unemployment rate (% of labour force)	6.7	6.6	6.6	6.6	0.0	-0.3	-0.2	0.0
	March 2023 (Q4 on Q4 percentage change)				Revisions vs December 2022 (percentage points)			
	22Q4	23Q4	24Q4	25Q4	22Q4	23Q4	24Q4	25Q4
HICP	10.0	2.8	2.7	2.0	0.0	-0.8	-0.6	0.0
Real GDP	1.9	1.1	1.7	1.5	0.3	0.3	-0.5	0.0

Source: March 2023 MPE.

Notes: Revisions are calculated based on rounded figures.

Recent (B)MPE projections for real GDP

(chain linked volumes, 2019Q4=100)

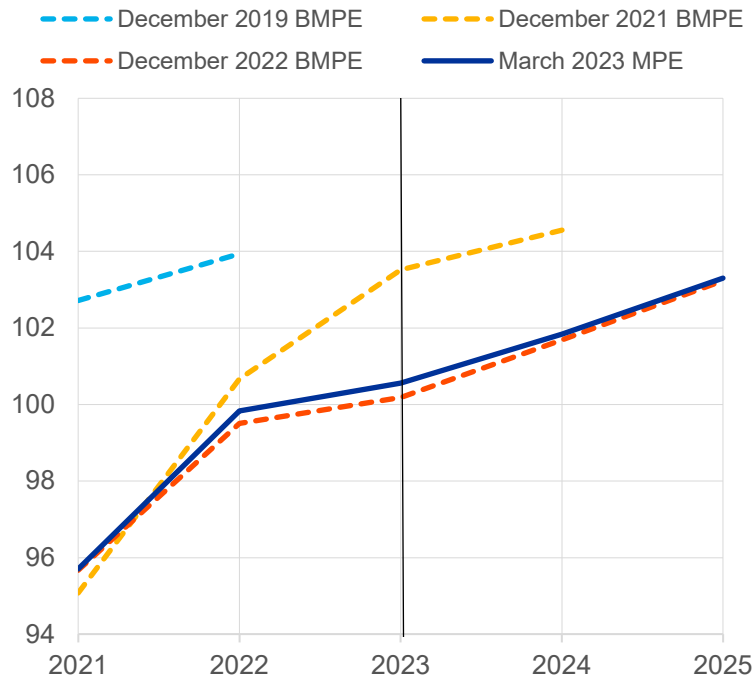

Source: (B)MPE. MPE refers to ECB staff macroeconomic projections. BMPE refers to Eurosystem staff macroeconomic projections.

Consumption and investment projections since December 2021

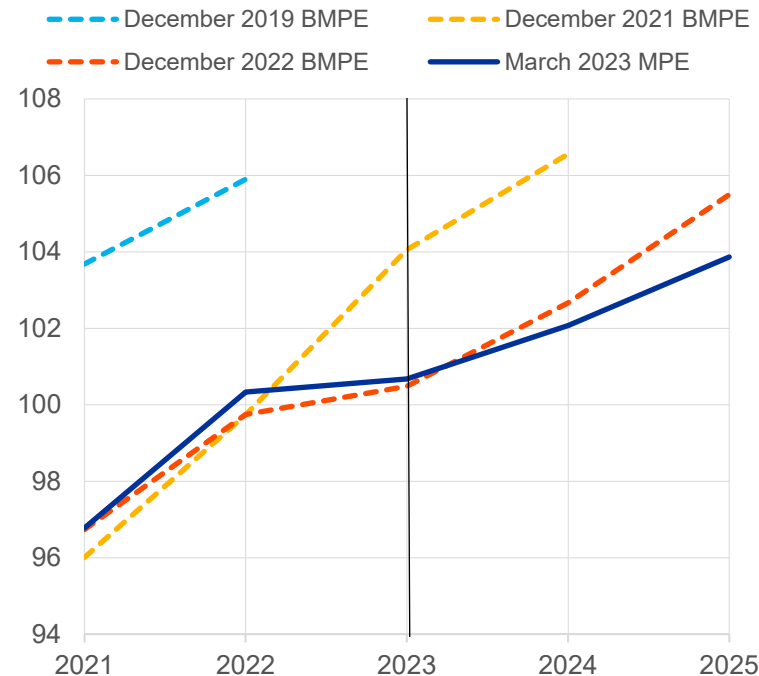

Private consumption

(chain linked volumes, 2019=100)

Total investment

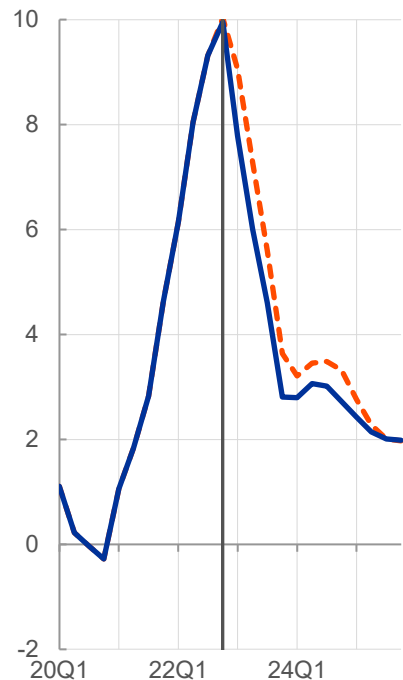

(chain linked volumes, 2019=100)

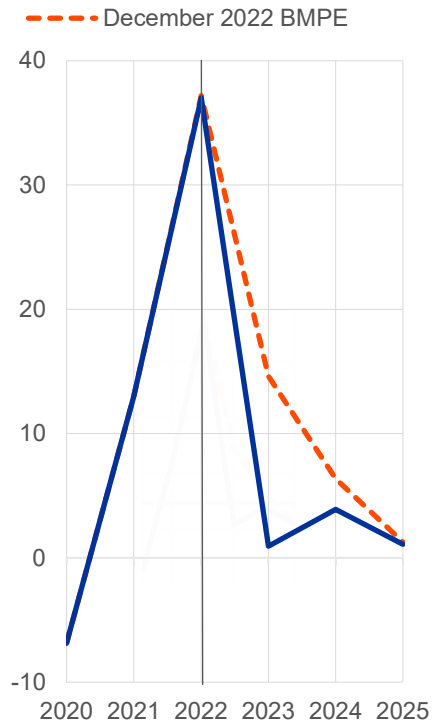

Source: (B)MPE. MPE refers to ECB staff macroeconomic projections. BMPE refers to Eurosystem staff macroeconomic projections.

March 2023 MPE: HICP across components

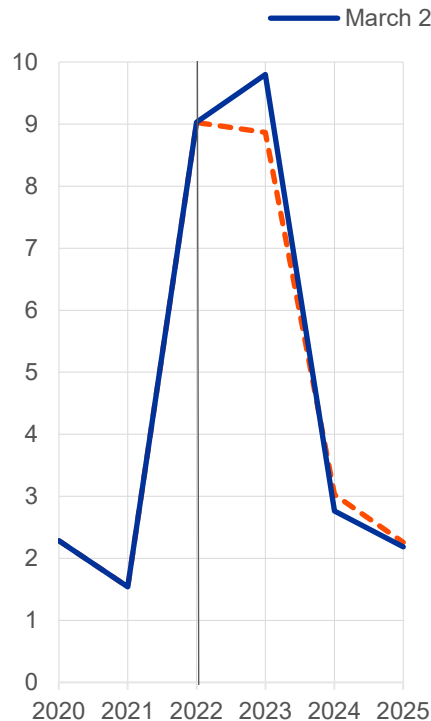

HICP
(annual percentage changes)

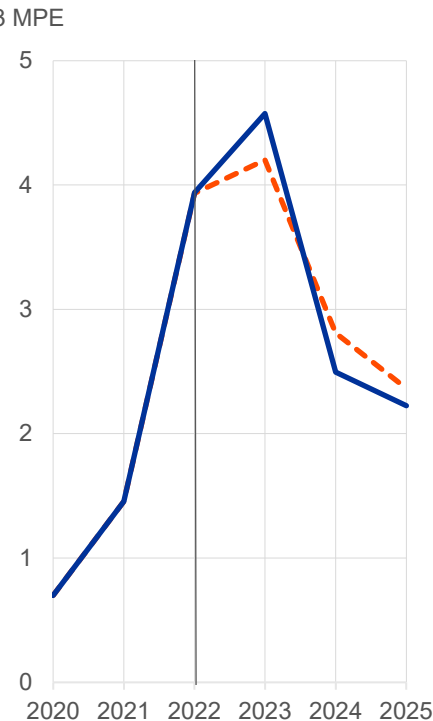

HICP energy
(annual percentage changes)

HICP food
(annual percentage changes)

HICP excl. energy and food
(annual percentage changes)

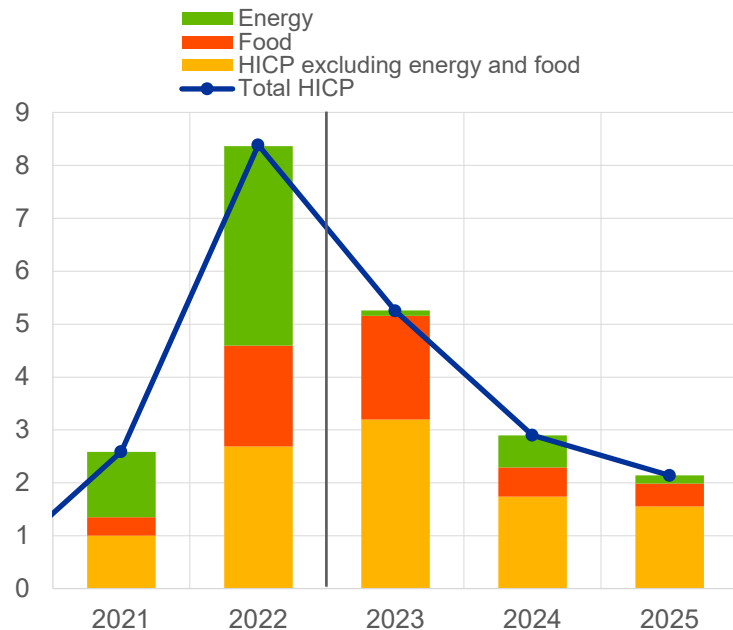

Source: March 2023 MPE.

Note: Headline HICP is shown at quarterly frequency. The components of HICP are shown at annual frequency.

March 2023 MPE: HICP and HICPX developments

HICP

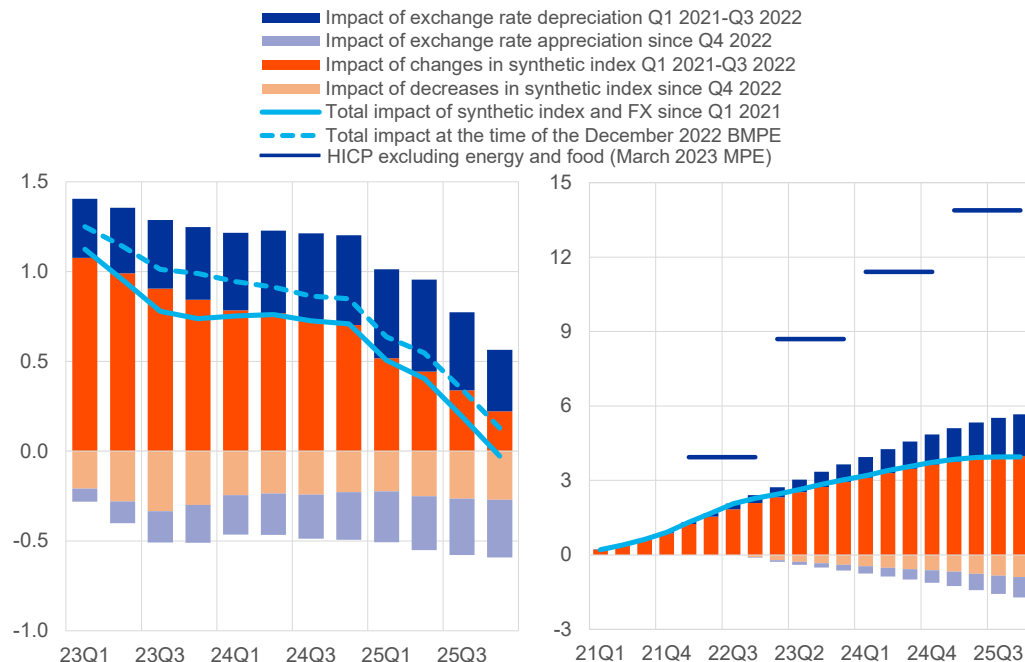

(annual percentage change; percentage points)

Source: March 2023 MPE.

Role of indirect effects from energy prices and exchange rate for HICPX

(left side: percentage points; right side: percentage change)

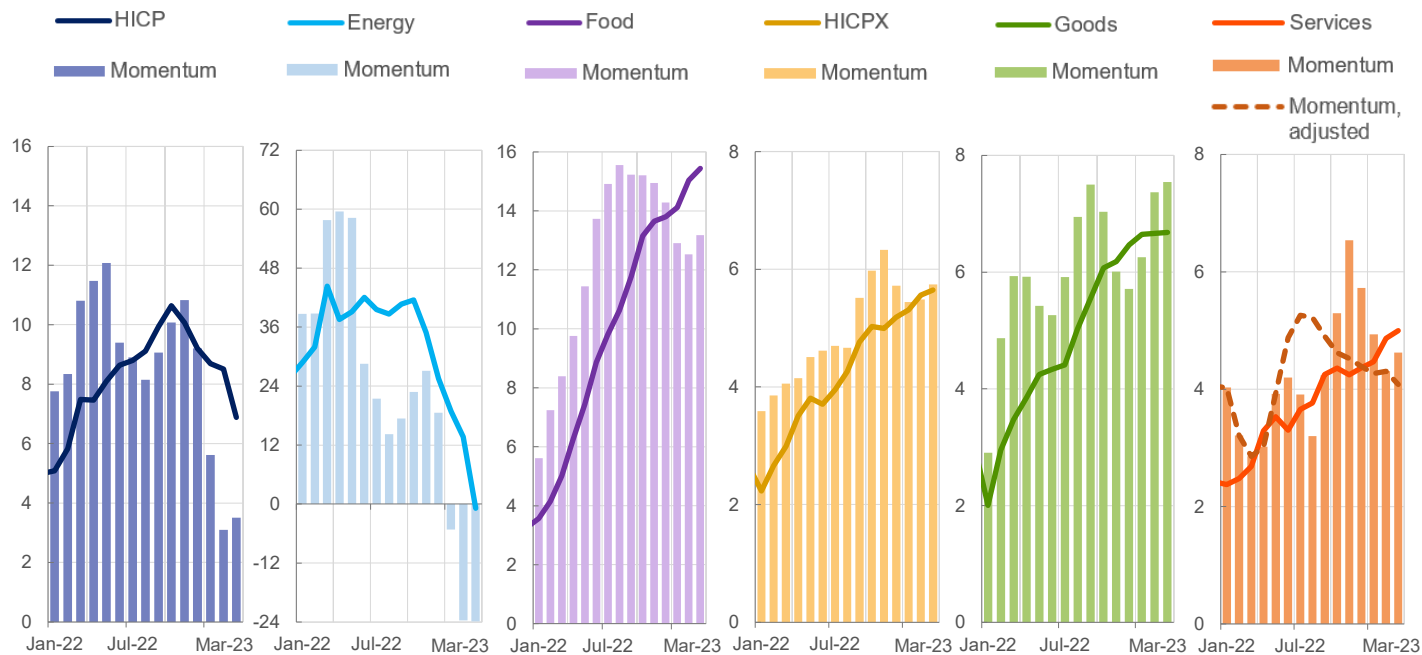

Sources: Basic Model Elasticities (BME) and ECB calculations.

Notes: The indirect effect is calculated by applying the historical and assumed movements in a synthetic indicator (which combines oil and gas prices) to the BMEs for oil and movements in the nominal effective exchange rate of the euro to the BMEs for the nominal effective exchange rate (NEER). The BMEs are derived from the macroeconomic models used in the projections by national central banks.

Inflation momentum for HICP and sub-components

(3 months-on-3 months; annualised percentage changes)

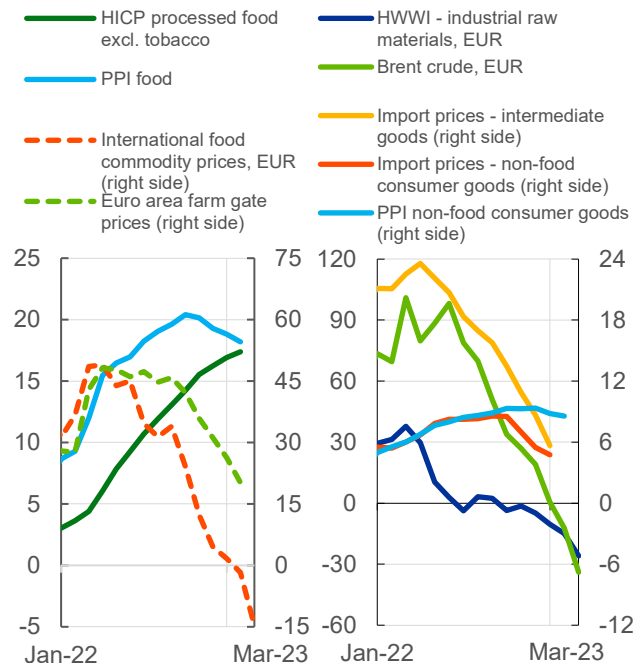

Sources: Eurostat and ECB calculations.

Notes: Momentum is defined as annualised 3 months-on-3 months rates, seasonally adjusted. HICPX: HICP excluding energy and food. The adjusted momentum series on the right panel corresponds to annualised 3 months-on-3 months rates excluding the effects of the 9 euro ticket in Germany. The latest observation is for March 2023 (flash).

Pipeline pressures

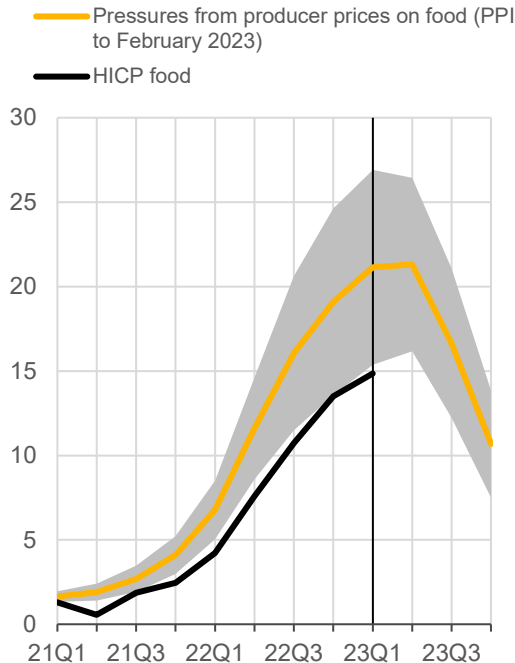

Pipeline pressures for food and NEIG (annual percentage changes)

Sources: Eurostat, Hamburg Institute of International Economics (HWWI) and ECB calculations.

Latest observations: March 2023 for Brent crude (EUR), industrial raw materials and international food commodity prices; February 2023 for HICP processed food excl. tobacco, euro area farm gate prices, PPI food and PPI non-food consumer foods; January 2023 for import prices.

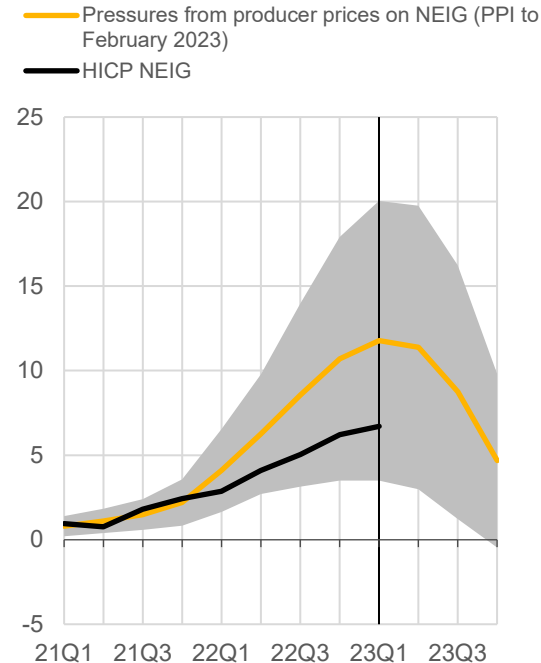

Pipeline pressures for food (annual percentage changes)

Sources: Eurostat, ECB staff estimates.

Notes: The latest observations are March 2023 (flash) for HICP and February 2023 for producer price index (PPI). The shaded area shows 95% confidence interval for the indicator for producer price pressures (IPII). The IPII for food is estimated with local projections with food (seasonally adjusted) as dependent variable, autoregressive terms and PPI for the food industry. The results for the IPII for food display directional nonlinearities, i.e. a higher impact for positive PPI changes than negative ones. The IPII for NEIG is estimated with local projections and no nonlinearities in the response for NEIG were found. The sample period of the estimations for both models goes up to the second quarter of 2022.

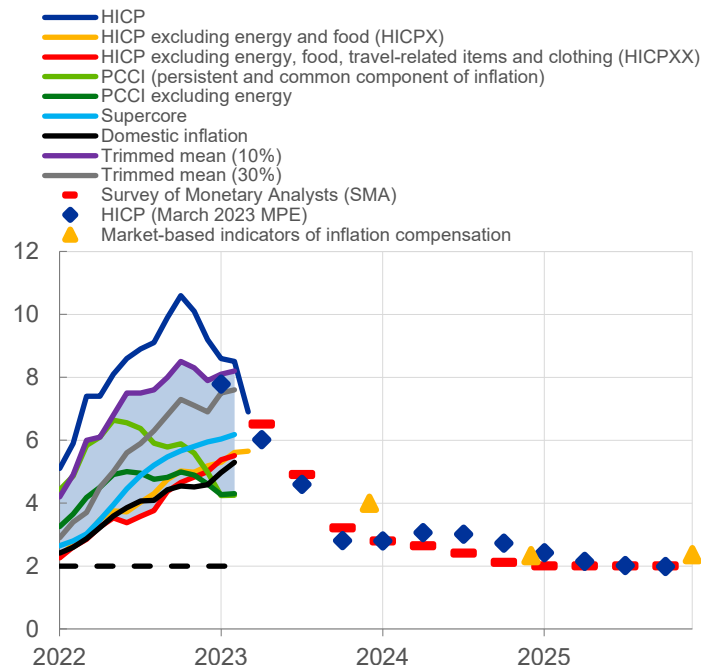

Pipeline pressures for NEIG (annual percentage changes)

Indicators of underlying inflation

Indicators of underlying inflation

(annual percentage changes)

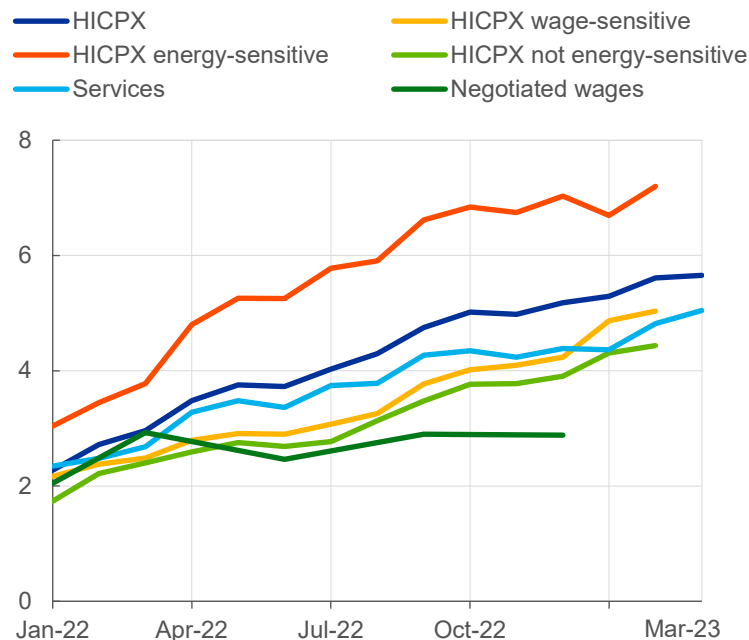

Sources: Eurostat, Refinitiv, ECB Survey of Professional Forecasters (SPF), March 2023 ECB staff macroeconomic projections and ECB calculations.

Notes: The SMA and the March 2023 ECB staff macroeconomic projections show quarterly forecasts. The cut-off date for data included in the ECB staff macroeconomic projections was 1 March.

Latest observations: March 2023 (flash) for HICP and HICPX and February 2023 for the rest. The latest observation for market-based indicators of inflation compensation is 31 March 2023.

HICPX inflation

(annual percentage changes)

Sources: Eurostat and ECB calculations.

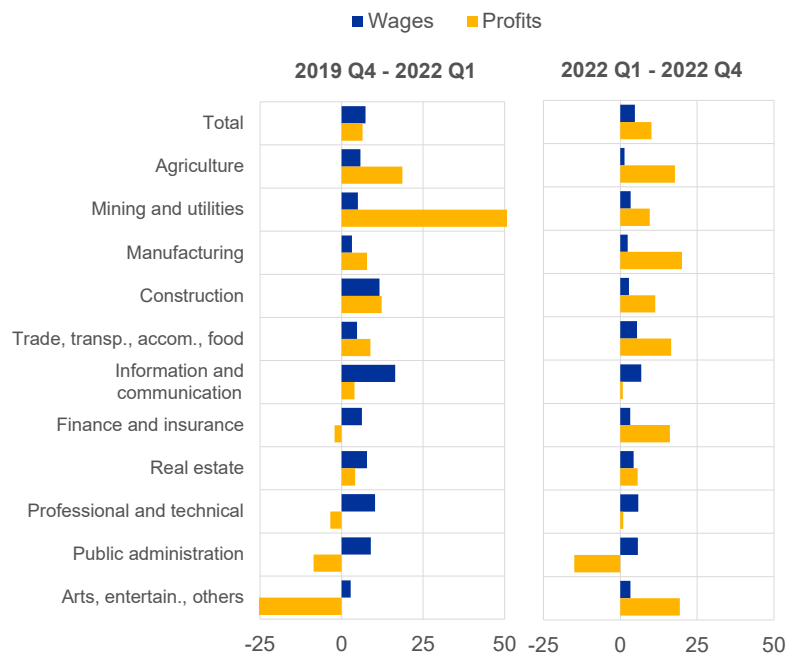

Notes: HICPX wage-sensitive items are an experimental composite measure based on items with a share of wages in direct costs above 40%. The energy-sensitive component is based on items with a share of energy in total (direct and indirect) costs above the average energy share across NEIG and services items.

Latest observations: 2022 Q4 for negotiated wages, March 2023 (flash) for HICPX and services and February 2023 for the rest.

Sectoral wage and profit developments

Sectoral wage and profit developments

(percentage changes over the indicated period)

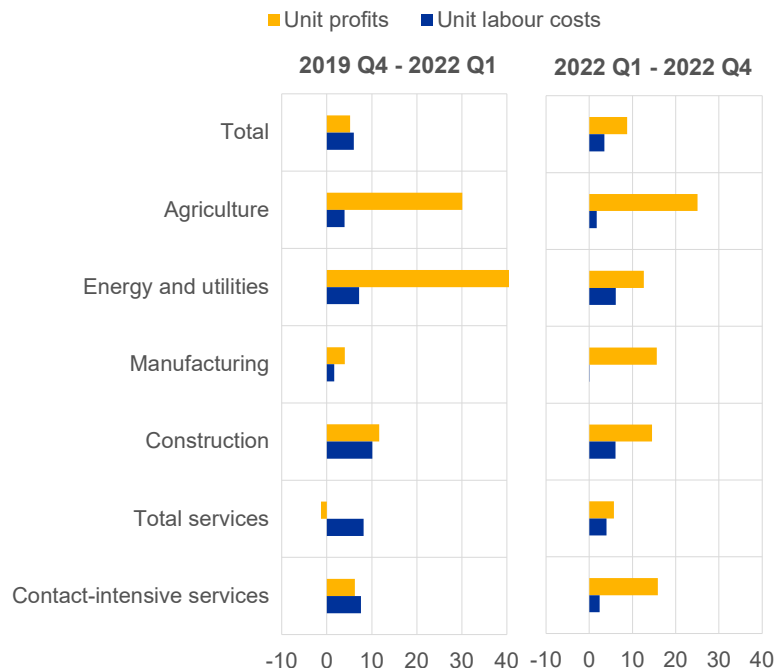

Sources: Eurostat and ECB calculations.

Notes: Wages refer to compensation of employees, profits to gross operating surplus. Wages include income for the self-employed. In the left panel the value for mining and utilities is 54.3% and for arts, entertainment and others it is -29.4%.

The latest observation is for the fourth quarter of 2022.

Sectoral unit profits and unit labour costs

(percentage changes over the indicated period)

Sources: Eurostat and ECB staff calculations.

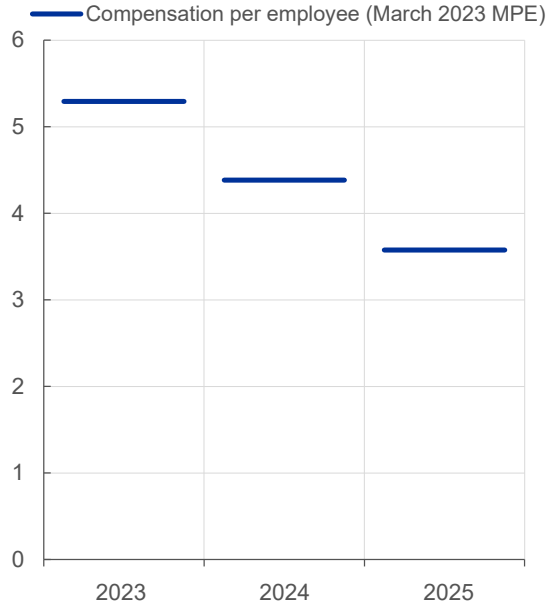

Notes: Unit profits correspond to gross operating surplus over real value added. Contact-intensive services include trade, transport, accommodation and food and arts, entertainment, recreation and other services.

The latest observation is for the fourth quarter of 2022.

March 2023 MPE: Nominal wages, real wages and unit labour costs

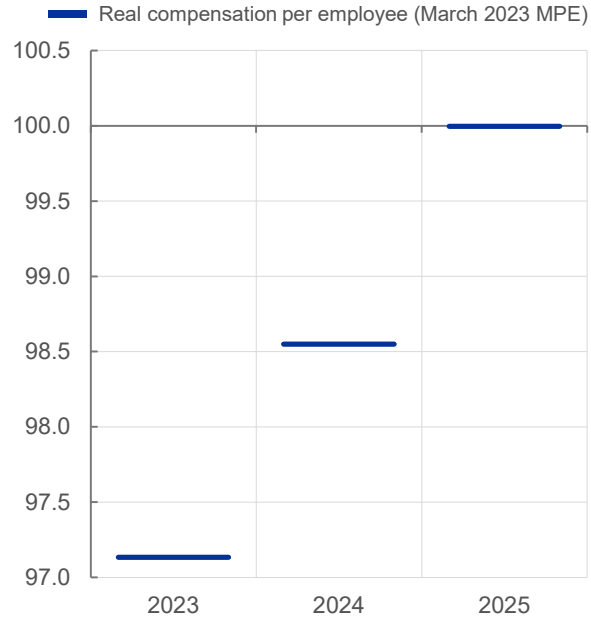

Nominal wages

(annual percentage changes)

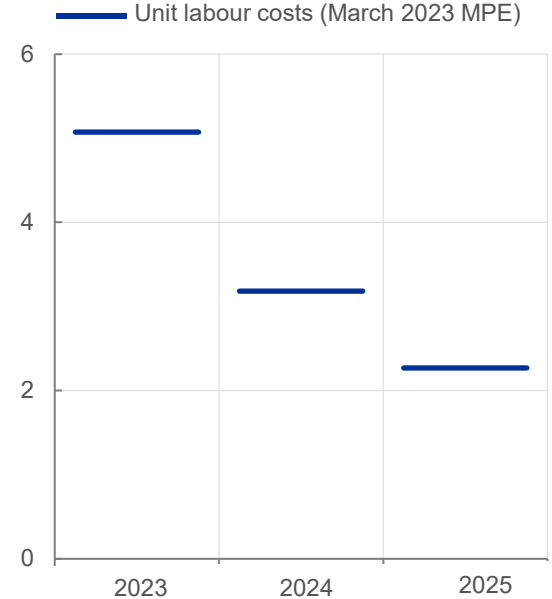

Real wages

(Index 2019 = 100; deflated by HICP)

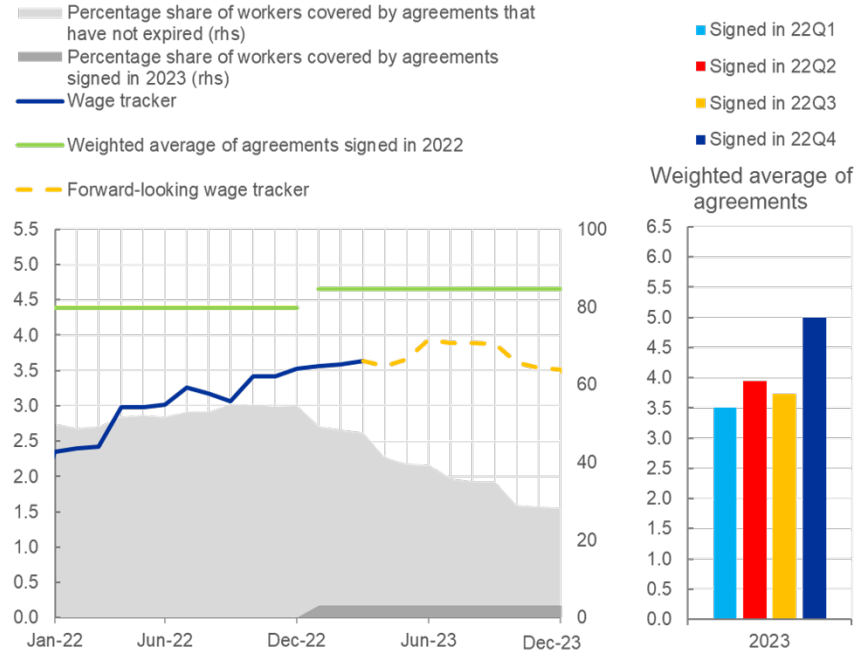

Unit labour costs

(annual percentage changes)

Sources: March 2023 ECB staff macroeconomic projections, Eurostat and ECB calculations.
The latest observations are for Q4 2022.

Forward-looking wage trackers (annual percentage changes)

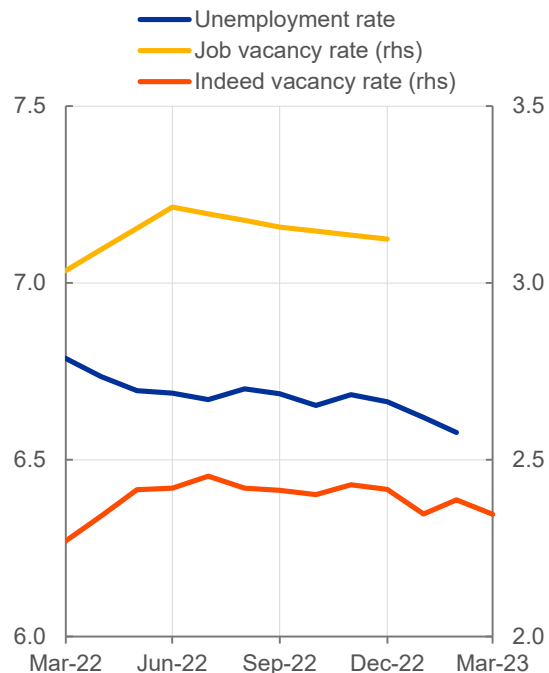

Sources: Calculations based on micro data on wage agreements provided by Deutsche Bundesbank, Banco de España, the Dutch employers' association (AWVN), Oesterreichische Nationalbank, Bank of Greece, Banca d'Italia and Banque de France. Data for France are based on an updated version of Gautier, E. (2022): [Negotiated wage rises for 2022: the results so far](#). Note: Euro area aggregate based on ES, IT, GR, AT, DE, NL, FR as of March 2023.

Unemployment, employment and labour force

Unemployment and job vacancy rates

(percentages of the labour force; percentages of jobs)

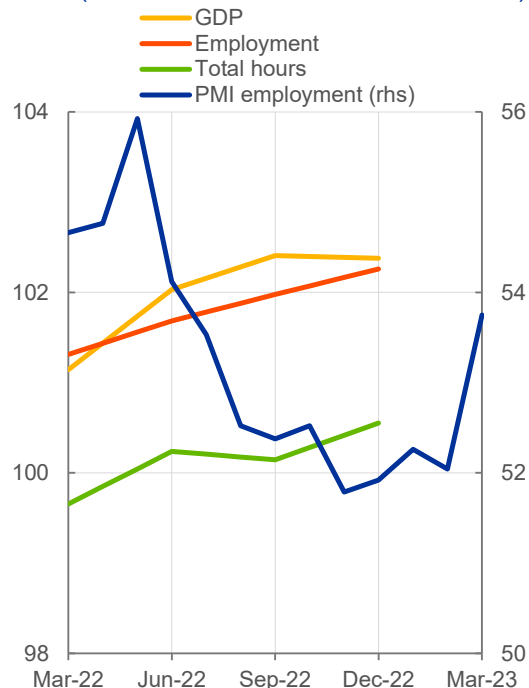

Sources: Eurostat, Indeed and ECB calculations.

Note: The indeed rate is computed as job postings over job postings plus implied monthly employment.

The latest observations are for February 2023 for unemployment, Q4 2022 for Job vacancy rate, March 2023 for Indeed vacancy rate.

GDP, employment and hours worked

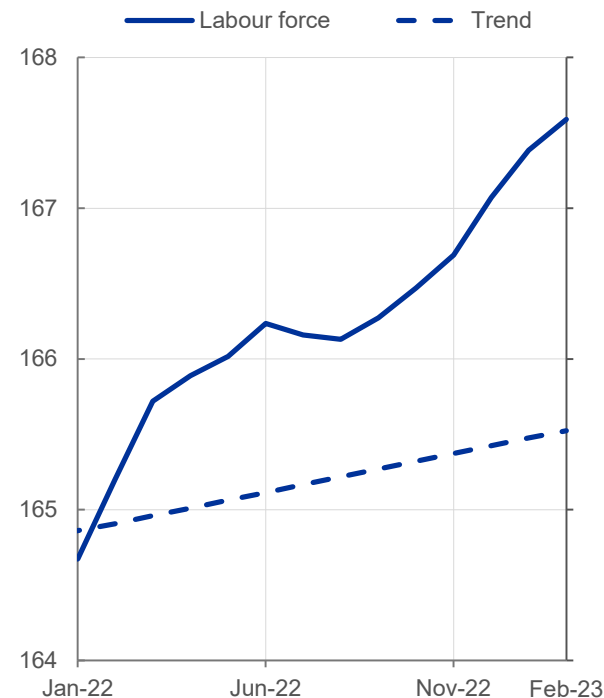

(index: 2019Q4 = 100; diffusion index)

Sources: Eurostat, S&P Global and ECB calculations.

The latest observations are for Q4 2022 and for March 2023 for PMI.

Labour force (millions)

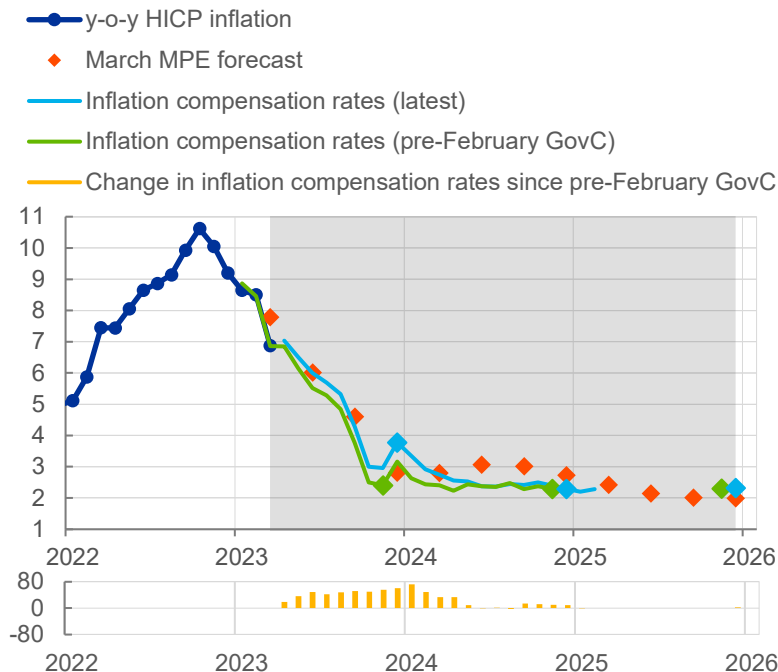

Sources: Eurostat and ECB calculations.

Note: The linear trend is computed for the period January 2005 and December 2019.

The latest observation is for February 2023.

Inflation path implied by market-based inflation compensation and staff projections

(percentages per annum)

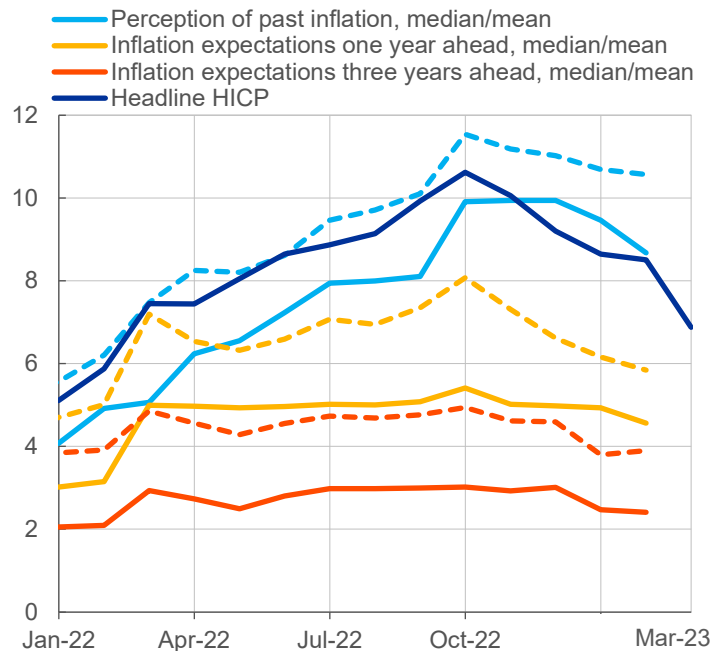

Sources: Bloomberg, Refinitiv and ECB calculations.

Notes: The coloured diamonds refer to forward inflation-linked swap (ILS) rates that extend the equally coloured line of inflation fixings. Premia-adjusted forward ILS rates are average estimates from two affine term structure models as in Joslin, Singleton and Zhu (2011) applied to ILS rates adjusted for the indexation lag, with the long-run mean calibrated to 1.9% until the end of April 2021 and to 2% thereafter; see Burban et al. (2021), Economic Bulletin, Issue 8, ECB, Box 4. The grey area refers to the projection horizon ending in December 2025.

The latest observations are for 31 March 2023 for inflation compensation rates and 15 February 2023 for March MPE.

ECB CES: inflation perceptions and expectations

(annual percentage changes)

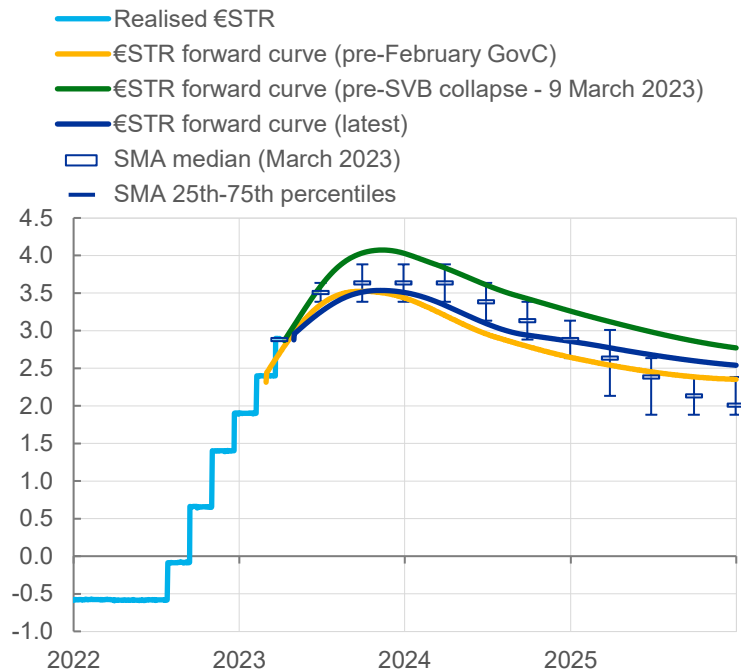

Sources: ECB Consumer Expectations Survey (CES) and Eurostat

Note: Solid/dashed lines represent the median/mean.

The latest observation is for March 2023 (flash) for headline HICP, February 2023 for the ECB CES.

€STR forward curve and survey expectations for the deposit facility rate (percentages per annum)

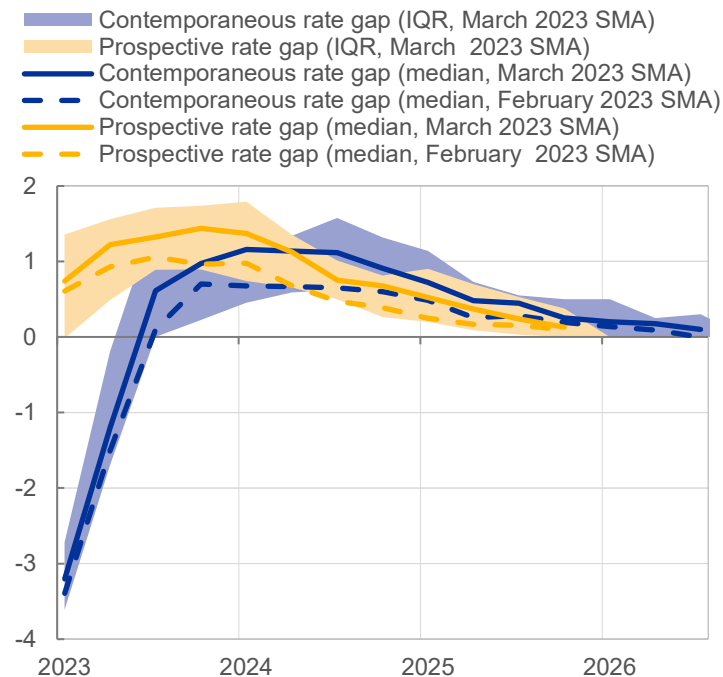

Sources: Refinitiv and ECB calculations.

Notes: The bars depict the median of responses in the 2 March SMA survey on expectations of future deposit facility rates. Surveys are adjusted for an €STR vs DFR spread.

The latest observation is 31 March 2023.

Expected real rate gap path (percentages per annum)

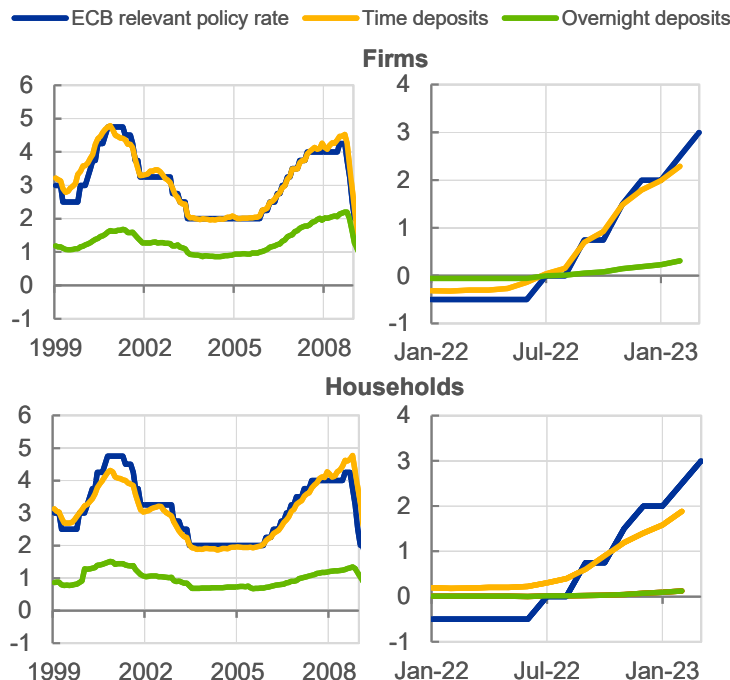

Sources: SMA, Refinitiv, Bloomberg and ECB calculations.

Notes: The contemporaneous rate gap is computed as the difference between the current period DFR and one quarter ahead y-o-y inflation. The prospective rate gap is the difference between the DFR expectations for the current and three following periods and the expectations for one year ahead y-o-y inflation. The latest observations are for 2 March 2023 for SMA.

Policy and deposit rates

(percentages per annum)

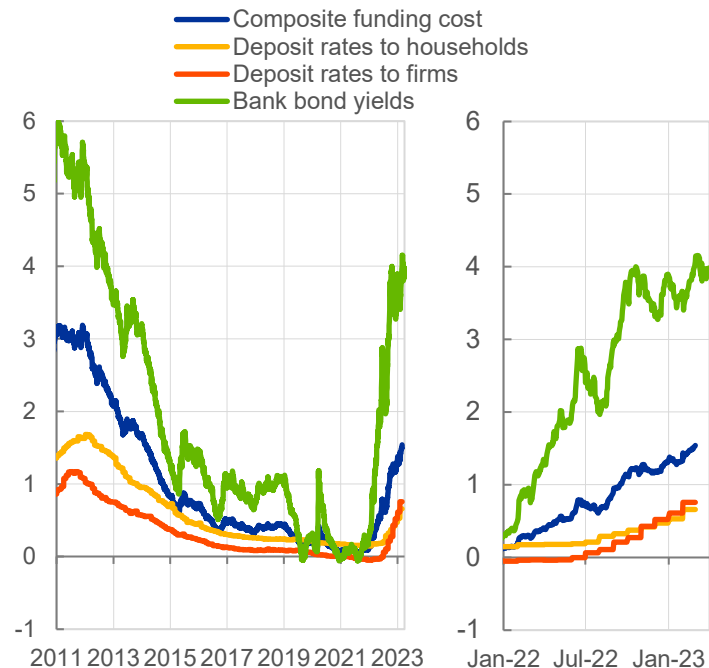

Sources: ECB (MFI Interest Rate Statistics (MIR), financial market data (FM)) and ECB calculations.

Notes: The ECB relevant policy rate is the MRO up to May 2014 and the DFR thereafter. Time deposits are deposits with agreed maturity of up to 2 years.

The latest observations are for March 2023 for the ECB relevant policy rate and February 2023 for overnight and time deposits.

Bank funding costs

(percentages per annum)

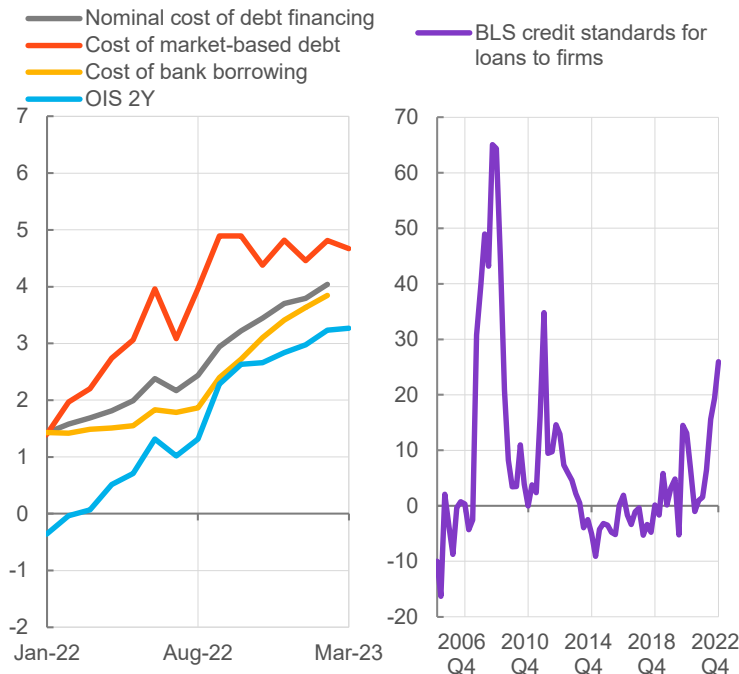

Sources: ECB (Balance Sheet Items (BSI), MIR), IHS Markit iBoxx and ECB calculations.

Notes: Daily bank bond yields. Monthly deposit rates on new business volumes weighted by outstanding amounts. Composite funding cost, calculated as a weighted average of the cost of deposits and market debt funding, with the respective outstanding amounts on bank balance sheets used as weights.

The latest observations are for 31 March 2023 for bond yields; February 2023 for BSI and MIR.

Cost of debt financing and credit standards for firms

(left panel: percentages per annum, right panel: percentage balances)

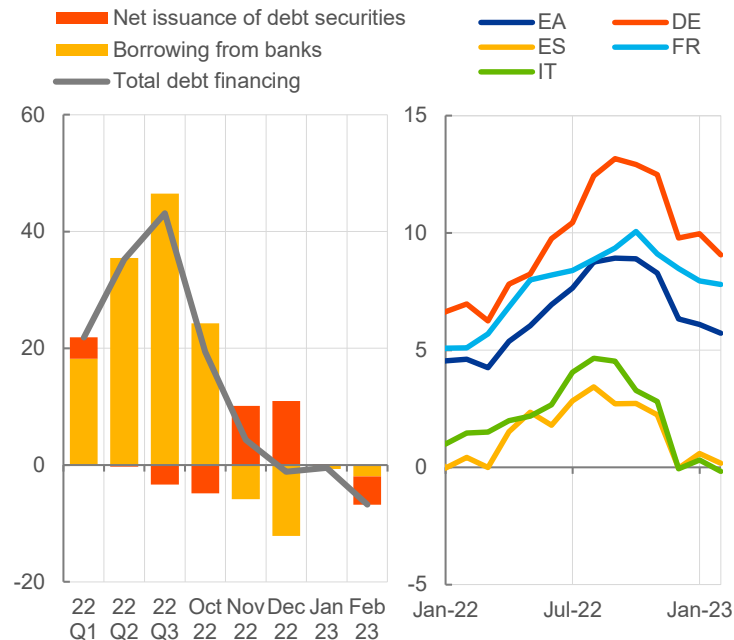

Sources: ECB (MIR, Quarterly Sector Accounts (QSA), Bank Lending Survey (BLS)), Merrill Lynch, Refinitiv and ECB calculations.

The latest observations are for the fourth quarter of 2022 for BLS credit standards for loans to firms, February 2023 for the nominal cost of debt financing and bank borrowing and 31 March 2023 for the cost of market-based debt and OIS.

Total debt financing of euro area firms and loan growth by country

(left panel: monthly average flows over the period in EUR billions, right panel: annual percentage changes)

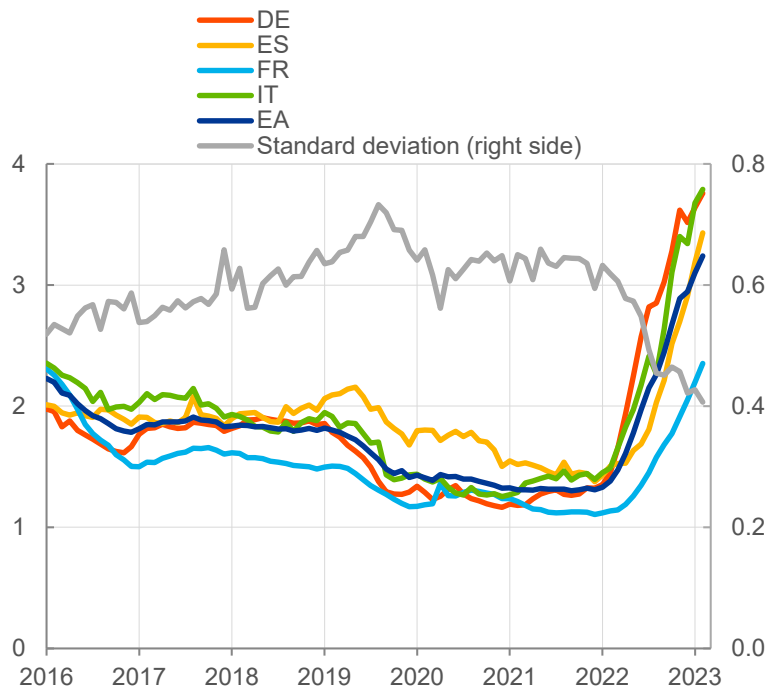

Sources: ECB (BSI, CSDB-Derived Securities Issues Statistics (CSEC) and ECB calculations.

Notes: Total debt financing is the sum of MFI loans and net issuance of debt securities. MFI loans are adjusted for sales, securitisation and cash pooling activities. The seasonal adjustment of debt securities is not official. The latest observation is for February 2023.

Cost of borrowing for households for house purchase

(percentages per annum)

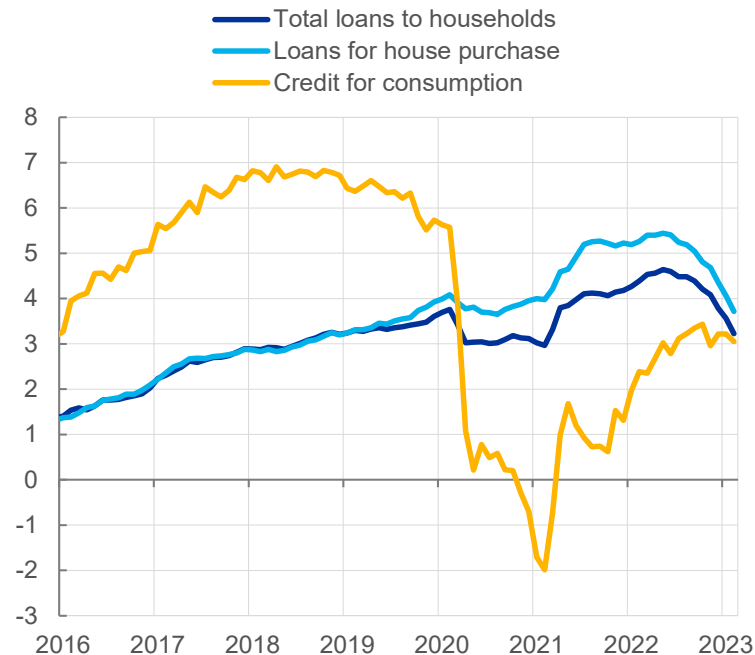

Sources: ECB (MIR) and ECB calculations.

Notes: The cross-country standard deviation is calculated using a fixed sample of 12 euro area countries.

The latest observation is for February 2023.

Loans to households by purpose

(annual percentage changes)

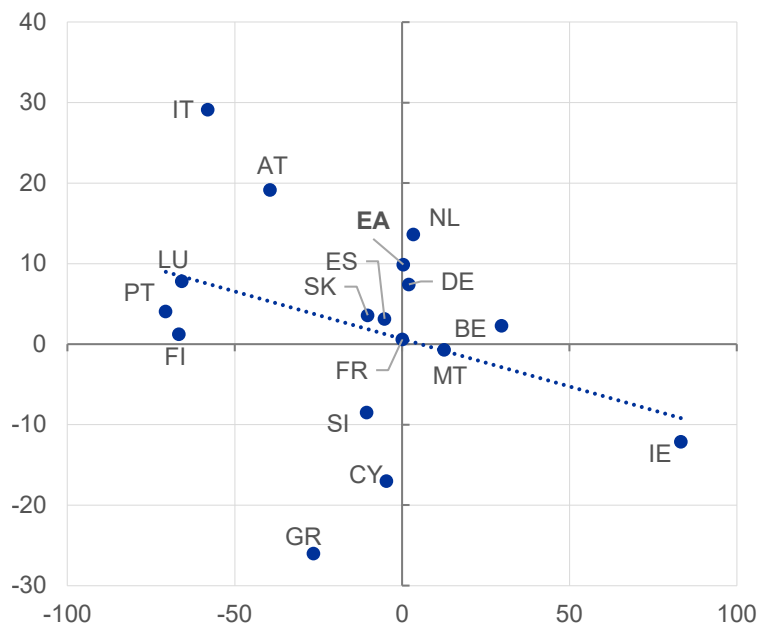

Source: ECB (BSI).

Notes: MFI loans are adjusted for sales and securitisation. Up to January 2022, the adjustment for sales and securitisation in loans by purpose is not fully harmonised across countries. Since February 2022, it is based on data collected under the current BSI Regulation but not yet published on the ECB website. The latest observation is for February 2023.

Variable and fixed rate mortgages: spreads and changes in shares

(x-axis: average spread between variable and fixed mortgage rates in percentages per annum; y-axis: change in the share of variable mortgages since December 2021 in percentage points)

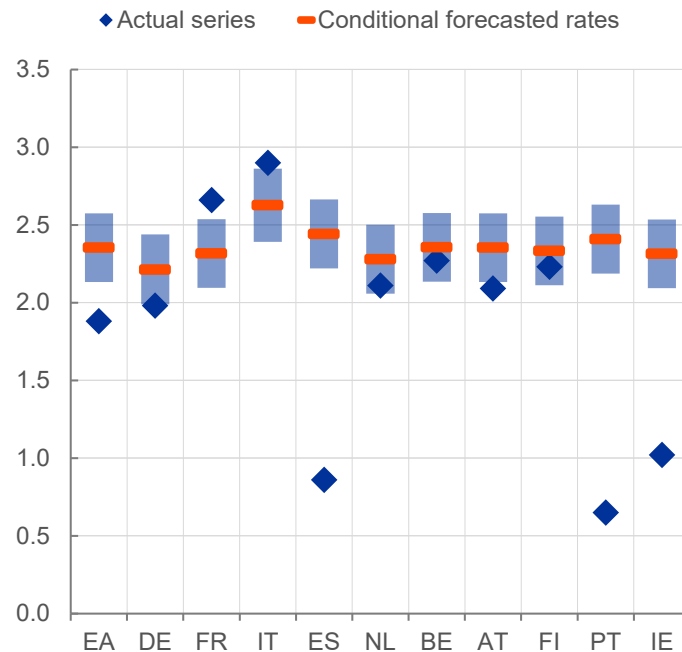

Sources: ECB (MIR) and ECB calculations.

Notes: Shares refer to new business lending. The x-axis shows the average spread calculated as the difference between variable and fixed mortgage rates from December 2021 to February 2023.

The latest observation is for February 2023.

Household time deposit rates: state of transmission in February 2023

(percentages per annum)

Sources: ECB and ECB calculations.

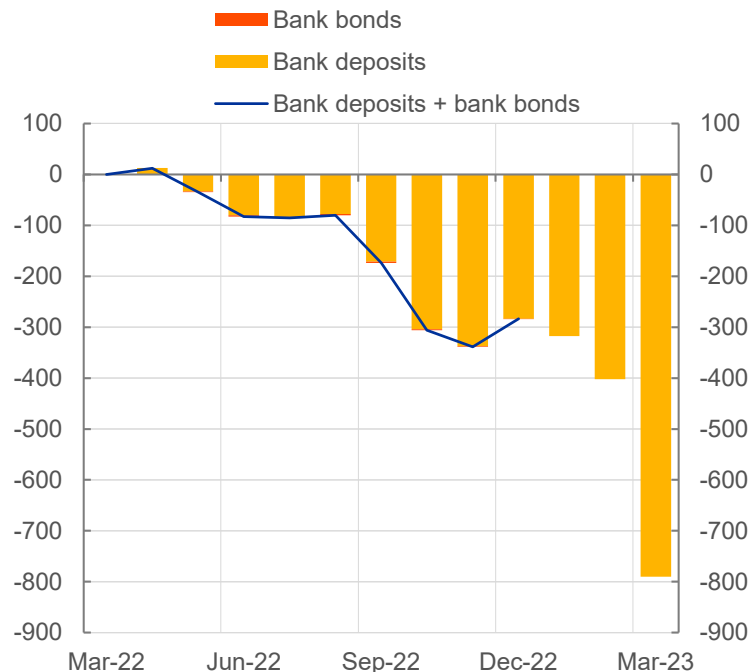

Notes: Results are based on a panel ECM using the Pooled Mean Group (PMG) estimator on euro area-10 data over January 1999-December 2021. Blue bars refer to 95% confidence bands. The model for time deposits (<2y) uses the 1m Euribor and 10y sovereign spreads as explanatory variables. The model allows the estimated parameters to differ across periods distinguishing between before and after the Global Financial Crisis.

The latest observation is for February 2023.

Deposits developments and bank funding in the US and euro area (I)

Bank funding in the US

(cumulated monthly differences in outstanding amounts in USD bn since end-March 2022; SA bank deposit, NSA bank bonds)

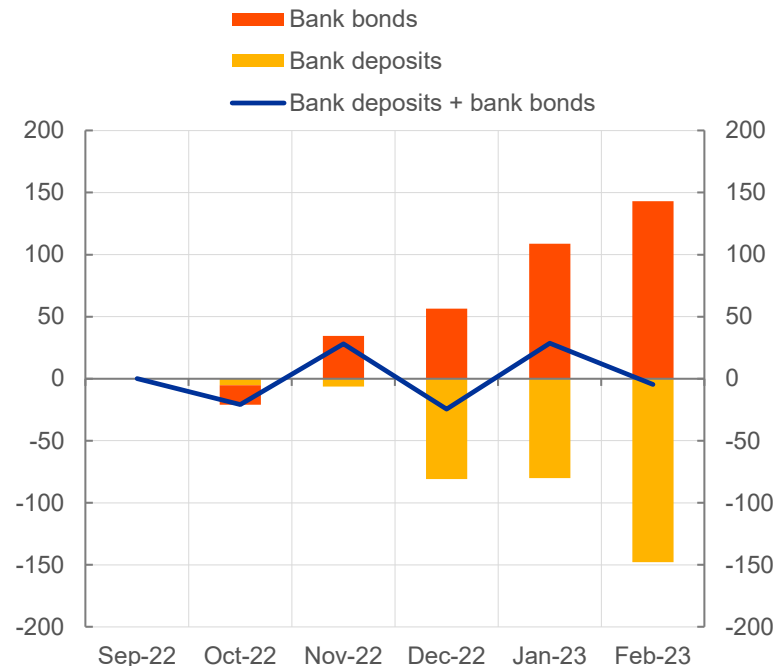

Sources: Federal Reserve Board/Haver Analytics and ECB calculations.

Notes: Banks are domestically chartered commercial banks, US branches and agencies of foreign banks and Edge Act and agreement corporations. Bank bond data are quarterly and interpolated at monthly frequency. Consolidated bank bond issuance.

Latest observation: March 2023 for bank deposits (March monthly observation covers until 22 March). The latest observation for bank bonds, and thus also for the total, is December 2022.

Bank funding in the euro area

(cumulated flows in EUR bn since end-September 2022; SA)

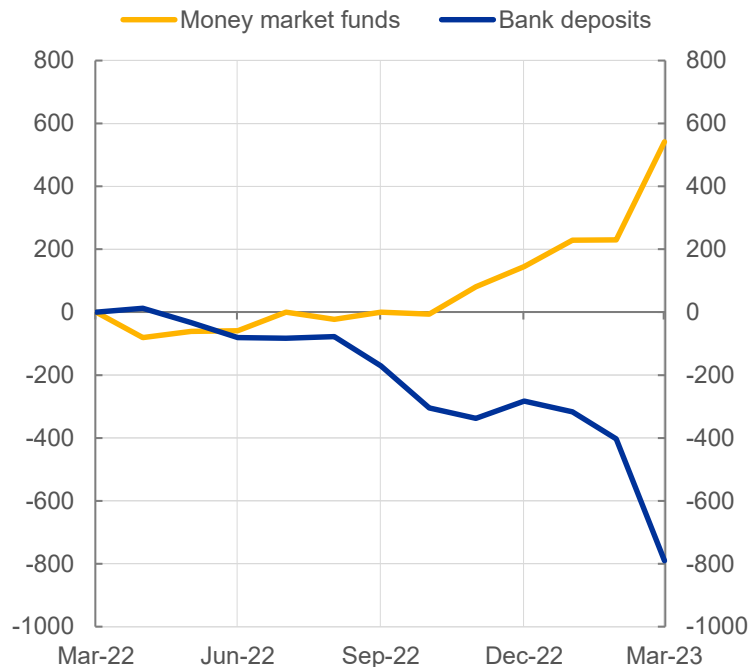

Sources: ECB (BSI) and ECB calculations. Notes: Bank deposits consist of deposits held with the MFI sector by euro area money holding sector excluding financial vehicle corporations involved in securitisation activity. Their flows have been adjusted for the operational incident in TARGET2 which is the main factor affecting deposits with the Eurosystem in recent months. This factor inflated the September 2022 OFI deposits, being reversed in October and November 2022. Bank bonds are those held by the euro area money holding sector. Latest observation: February 2023.

Deposits developments and bank funding in the US and euro area (II)

Deposits and money market funds in the US

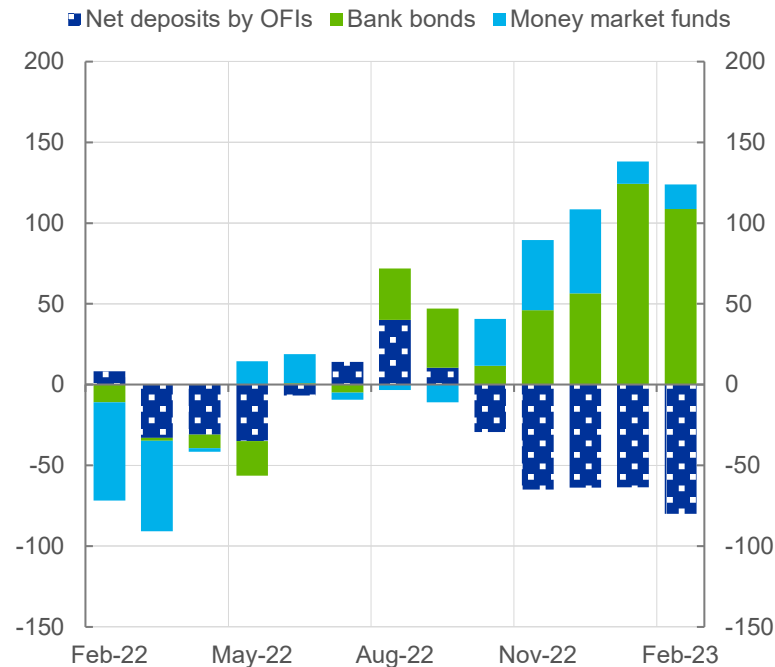

(cumulated monthly differences in outstanding amounts in USD bn since end-March 2022; NSA money market funds, SA bank deposits)

Sources: Bloomberg, Federal Reserve Board/Haver Analytics and ECB calculations.
Latest observation: March 2023 (March monthly observation covers until 22 March).

Deposits, money market funds and bank bonds in the euro area

(3-month cumulated flows in EUR bn; SA)

Sources: ECB (BSI) and ECB calculations.

Notes: The OFI sector comprises non-bank financial institutions other than pension funds and insurance corporations. Net deposits by OFIs consists of M3 deposits held by OFIs minus loans to OFIs. Figures have been adjusted for the operational incident in TARGET2 which inflated the September 2022 OFI deposits, being reversed in October and November 2022. Latest observation: February 2023.
