## Source: ECB securities issues statistics.

<sup>1) &</sup>quot;Short-term" debt securities comprise securities that have an original maturity of one year or less, even if they are issued under longer-term facilities. Debt securities with a longer original maturity, with optional maturity dates, the latest of which is more than one year away, or with indefinite maturity dates are classified as "long-term".

<sup>2)</sup> The residual difference between total long-term debt securities and fixed and variable rate long-term debt securities consists of zero coupon bonds and revaluation effects.

<sup>3)</sup> As a full breakdown of net issues into gross issues and redemptions may not always be available for the period before November 2016, the difference between aggregated gross issues and redemptions may deviate from the aggregated net issues.

<sup>4)</sup> Monthly averages of the transactions during this period.

<sup>5)</sup> Annual growth rates are based on financial transactions that occur when an institutional unit incurs or redeems liabilities. The annual growth rates therefore exclude the impact of reclassifications, revaluations, exchange rate variations and any other changes which do not arise from transactions.

Table 2: Debt securities issued by euro area residents in all currencies, by issuing sector 1) and maturity 2) (EUR billions: nominal values)

Source: ECB securities issues statistics.

<sup>1)</sup> Corresponding ESA 2010 sector codes: "MFIs" (including the Eurosystem) comprises the ECB and the national central banks of the euro area (S.121), as well as deposit-taking corporations except the central bank (S.122); "financial corporations other than MFIs" comprises other financial intermediaries, except insurance corporations and pension funds (S.125), financial auxiliaries (S.126), captive financial institutions and money lenders (S.127) and insurance corporations (S.128); "non-financial corporations" (S.111); "central government" (S.1311); "other general government" (S.1312), local government (S.1313) and social security funds (S.1314).

<sup>2)</sup> The residual difference between total long-term debt securities and fixed and variable rate long-term debt securities consists of zero coupon bonds and revaluation effects.

<sup>3)</sup> As a full breakdown of net issues into gross issues and redemptions may not always be available for the period before November 2016, the difference between aggregated gross issues and redemptions may deviate from the aggregated net issues.

<sup>4)</sup> Monthly averages of the transactions during this period.

<sup>5)</sup> Annual growth rates are based on financial transactions that occur when an institutional unit incurs or redeems liabilities. The annual growth rates therefore exclude the impact of reclassifications, revaluations, exchange rate variations and any other changes which do not arise from transactions.

## Source: ECB securities issues statistics.

<sup>1)</sup> Corresponding ESA 2010 sector codes: "MFIs" (including the Eurosystem) comprises the ECB and the national central banks of the euro area (S.121), as well as deposit-taking corporations except the central bank (S.122); "financial corporations other than MFIs" comprises other financial intermediaries, except insurance corporations and pension funds (S.125), financial auxiliaries (S.126), captive financial institutions and money lenders (S.127) and insurance corporations (S.128); "non-financial corporations" (S.11).

<sup>2)</sup> Monthly averages of the transactions during this period.

<sup>3)</sup> Percentage change between the amount outstanding at the end of the month and the amount outstanding 12 months earlier.

<sup>4)</sup> Annual growth rates are based on transactions that occur during the period and therefore exclude reclassifications and any other changes which do not arise from transactions.
