Bridging tables between the accounting balance sheet items of the NCBs and the ECB and the items to be reported for statistical purposes

Version of 21 June 2016

Introduction

The bridging tables provide guidance to NCBs and the ECB on how to derive from their own accounting balance sheets the statistical information that must be reported to comply with Article 3 (concerning MFI balance sheet statistics) of Guideline ECB/2014/151.

The reporting requirements in respect of NCB accounting balance sheets follow Guideline ECB/2010/202 on the legal framework for accounting and financial reporting in the ESCB, as amended. These requirements concern outstanding amounts of weekly and annual reporting, although the bridging tables in this document only refer to annual reporting.

The matching between statistical and accounting concepts is only provided for Table 1 "monthly stocks (balance sheet items)"3 and is divided into two sections. Section (1) “Standard bridging table (from accounting to statistics)” presents the bridging information sorted by reference to the accounting items. Section (2) “Reverse bridging table (from statistics to accounting)” presents the same bridging information sorted by reference to the statistical instruments. The matching for the other tables required under Guideline ECB/2014/15 should be derived from the matching provided for Table 1.

The bridging tables provide corresponding items for every accounting item described in Guideline ECB/2010/20 with all potential statistical instruments that may be used for the statistical reporting. Where possible, corresponding items relating to the currency of the instrument are also provided. However, corresponding items in respect of other data dimensions (for example with "original maturity", “counterpart area” or “balance sheet counterpart sector”) cannot be provided systematically as the necessary information cannot be derived from the ESCB legal accounting

---

framework. These items should instead be obtained from the local implementation of
the accounting systems.

It should be noted that the accounting and statistical balance sheets of the NCBs
and the ECB are based on different methodological frameworks and feature various
differences. In particular, the mapping of asset and liability categories in the two
types of balance sheet is not always easy because of the lack of a one-to-one
 correspondence between items. In many cases, a single item of the accounting
balance sheet may be allocated to several items of the statistical balance sheet
depending on its composition. In addition, the statistical balance sheet uses a
simplified naming convention, whereby loans and deposits on each side of the
balance sheet are bundled together and identified as "loans" on the asset side, and
as "deposits" on the liability side, e.g. deposits placed by NCBs are recorded as
loans for BSI reporting. Data are also not directly comparable owing to the different
recording practices used under the two frameworks. For instance, intra-Eurosystem
asset and liability positions are recorded on a gross basis for statistical purposes.
Similarly, valuation rules may differ, as the methodological framework of MFI balance
sheet statistics shows a preference for using market prices to value holdings of
securities.

Furthermore, bridges are established at the highest possible level of aggregation in
order to increase readability. More specifically, under (1), each statistical item is
matched with the corresponding accounting item at the highest level for which there
is a link between all of its admissible sub-categories; similarly, sub-items for which
the bridging would be the same as for the parent are not shown separately. For
instance, the accounting item A4 Claims on non-euro area residents denominated in
euro is bridged directly with the statistical item 2 Loans (all currencies), meaning that
this matching applies to all the sub-categories of item A4, i.e. A4.1 Balances with
banks, security investments and loans and A4.2 Claims arising from the credit facility
under ERM II. This logic is then reflected in (2).

1 Standard bridging table (from accounting to statistics)

A ASSETS

A1 Gold and gold receivables

X.A.1 Gold and gold receivables (only monetary gold)¹

A2 Claims on non-euro area residents denominated in foreign currency

A2.1 Receivables from the International Monetary Fund (IMF)

L9 Counterpart of special drawing rights allocated by the IMF

Notes

[1] These items are numbered differently as they are not listed in Table 1 of Annex 1 of Regulation (EU) No 1071/2013 of the European Central Bank, which refers to the statistical reporting requirements applicable to MFIs (excluding the Eurosystem).

[3] These are treated differently, depending on whether the legal issuer of coins is the national central bank or the central government. When the national central bank is the legal issuer, coins are recorded under “Sundry” (L12.3) in the accounting balance sheet, and under “Currency in circulation” for statistical purposes. When the central government is the legal issuer, coins in circulation are not reported as a liability of the national central bank in the accounting balance sheet, while national central banks' holdings of coins are recorded under “Coins of euro area” (A11.1). However, in statistical terms, coins in circulation are part of monetary aggregates and, by convention, an imputed liability under “Currency in circulation” on the central bank balance sheet, with a notional claim on the central government in “Remaining assets”.

[4] Coins denominated in national currency can generally be redeemed for extended periods or indefinitely, as per national policy. When the national central bank is the legal issuer, these coins are recorded under “Sundry” (L12.3) in the accounting balance sheet. For statistical purposes, they are recorded under “Currency in circulation” for the first 12 months following adoption of the euro, and then reclassified under “Remaining liabilities”. When the central government is the legal
issuer, coins in circulation denominated in national currency are not reported as a liability of the national central bank in the accounting balance sheet, while national central banks’ holdings of such coins are recorded under “Coins denominated in national euro area currency units” (A11.6(d)). However, in statistical terms, these coins are part of monetary aggregates for the first 12 months after adoption of the euro and, by convention, an imputed liability under “Currency in circulation” on the central bank balance sheet, with a notional claim on the central government in “Remaining assets”. After this twelve-month period is over, coins denominated in national currency are removed from the balance sheet of the national central bank.

[5] Indicates that the statistical instrument is a caption with no defined series key, with the consequence that every accounting item bridged with that statistical caption must instead be reported to one or more of its subcomponents for which series keys are defined.

**General note:** Identification numbers within brackets refer to accounting components identified as sub-items in the ESCB legal framework for accounting and financial reporting. Accounting sub-items are not reported distinctly for accounting purposes as single components, but are reported together with several other interrelated sub-items. The statistical reporting may however follow other arrangements.
